# Power Mac G5 Top Left Cooling Fan Unit Replacement

Written By: Salvador Aguilar
## INTRODUCTION

These steps will show you how to install the top left cooling fan unit.

## Step 1 — Side Panel

⚠ To avoid electrocution, shut down the computer. Do not open the computer or attempt to install any items inside it while the computer is on.

⚠ To avoid being burned, wait at least 10 minutes to allow the computer's internal components to cool.

## Step 2

● Remove all the cables, including the power cables before opening the unit.

This document was generated on 2020-11-15 09:53:46 PM (MST).

## Step 3

- Lift the tab to unlock the side panel.

- ⓘ The panel should fall out. If the panel does not fall out by itself pull a little from the edges.

## Step 4

- Remove the air deflector (the clear plastic cover) by pulling on the handle.

## Step 5 — Top Left Cooling Fan Unit

- Locate the top left cooling fan unit.

## Step 6

- Pull the fan straight out from its slot. You will need to remove two cables from the motherboard.
  - ⭐ It may be easier to reach the cables if you remove the PCI guide (next to the fan unit) first.

## Step 7

- After pulling out the fan unit, the area should look like this.

To reassemble your device, follow these instructions in reverse order.
