

# Installing PowerBook G3 Pismo Heat Shield

Author: iRobot

## Tools used in this guide

- [Phillips #0 Screwdriver](#) (1)

## Parts relevant to this guide

- [G3 Pismo Heat Shield](#) (1)

Removing the heat shield enables access to the RAM and the processor below.

## Step 1 — Keyboard

- Turn the keyboard locking screw so that it is parallel to the space bar.
- Pull the keyboard release tabs toward you and lift up on the keyboard until it pops free.
- Lift the keyboard out by pulling it up and away from you. Rest the keyboard, face down, on top of the track pad.

## Step 2

- Pull the keyboard ribbon straight up from the logic board. Place the keyboard aside.
- The connector may be tight. Gently rock the connector from side to side while pulling directly upward to free it. You can use this technique on many of the cards and cables you'll be disconnecting.
- Make sure you have removed the laptop battery and CD/DVD modules from the expansion bays before proceeding.

## Step 3

- Your laptop should look approximately like this.

## Step 4 — Heat Shield

- Remove the two silver Phillips #1 screws that attach the heat shield to the internal metal framework.
- Lift the heat shield up and pull it toward you.

## Step 5

- Your laptop should look approximately like this.

To reassemble your device, follow these instructions in reverse order.

To organize your screws, simply place each screw in the appropriate box as you remove them from your laptop.

If you are not planning on immediately reassembling your laptop, you may want to tape the screws to this paper.

Due to model variations, the screws you remove may differ slightly from this guide.
