

Installing MacBook Core 2 Duo Memory Cover

Author: iRobot

Tools used in this guide

- [Coin](#) (1)
- [Phillips #00 Screwdriver](#) (1)

Parts relevant to this guide

- [MacBook Memory Cover](#) (1)

This keeps the RAM levers out of the way of the battery and secures the hard drive.

Step 1 — Battery

- Use a coin to rotate the battery-locking screw 90 degrees clockwise.

Step 2

- Lift the battery out of the computer.

Step 3 — Memory Cover

- Unscrew the three evenly-spaced Phillips screws from along the rear wall of the battery compartment.
- The screws are captive to the metal memory cover so you cannot lose them.

Step 4

- Rotate the L-shaped memory cover so it clears the battery compartment opening and lift it up and out of the computer.

To reassemble your device, follow these instructions in reverse order.
