 - [Phillips #1 Screwdriver](#) (1)
 - [T4 Torx Screwdriver](#) (1)
-

Step 1 — Battery

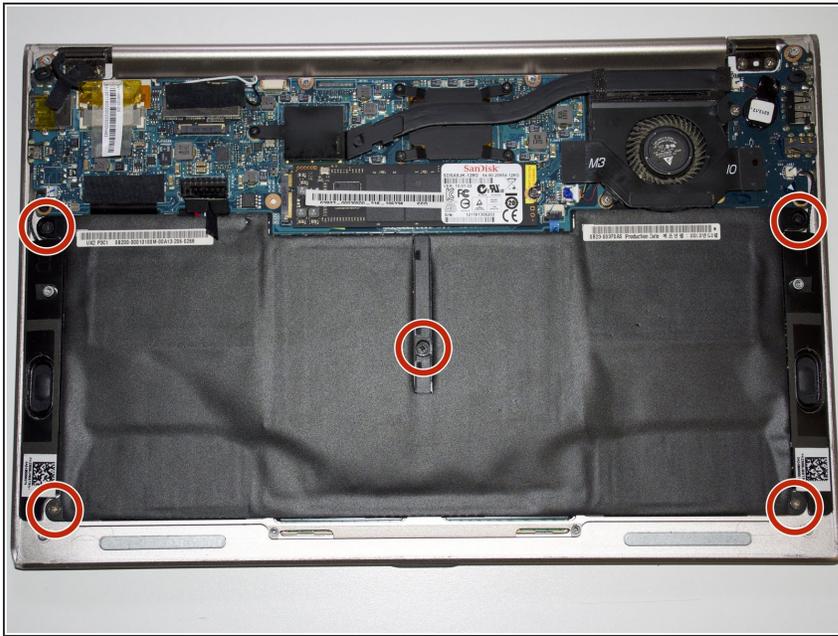

- Using a T4 Torx screwdriver, unscrew the ten screws lining the bottom cover. Then, proceed to remove the bottom cover by sliding it out parallel toward the back of the computer.
- There are two length of screws. Eight screws are 3mm and two are 5mm. The two 5mm screws always go into the two center holes along the back edge.

Step 2

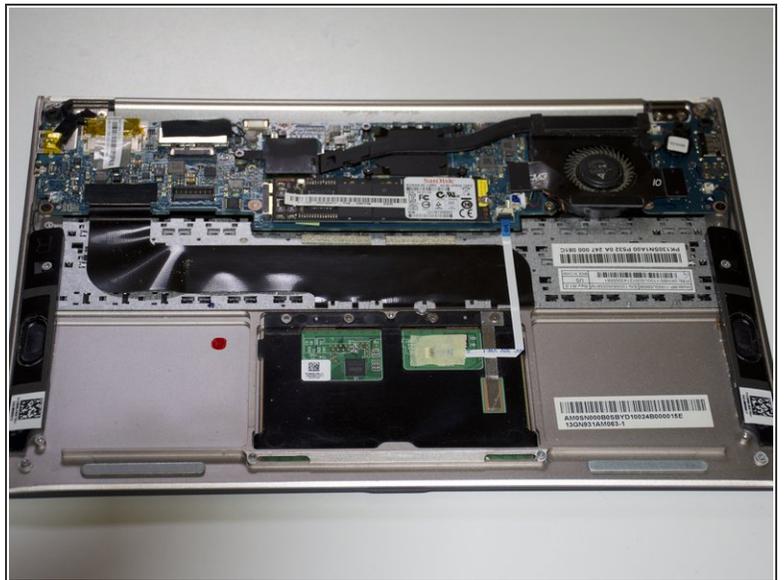

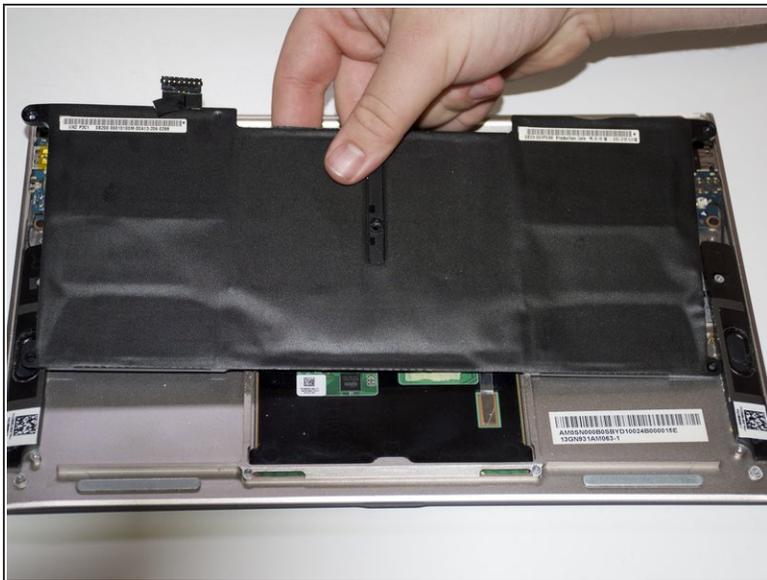

- Using an iFixit opening tool and your other hand, gently lift the connector up from the tape wrapped around the connector wires and pry the connector from the motherboard.

Step 3

- Remove the battery by unscrewing the five 3mm screws using a Phillips #1 screwdriver.
- ⓘ One at each corner and one in the center.

Step 4

- Lift the battery directly up and remove it from the device.

To reassemble your device, follow these instructions in reverse order.
