

HP 15-ay052nr Keyboard and Touchpad Replacement

How to replace a HP 15-ay052nr keyboard and touchpad.

Written By: Morgan Distler

INTRODUCTION

If the keys on the keyboard are not working or the touchpad is not responding, they may need to be replaced. To replace one of the systems, the entire keyboard/touchpad surface needs to be replaced.

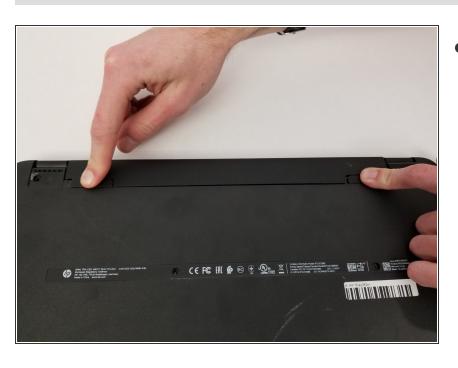

TOOLS:

- JIS #0 Screwdriver (1)
- iFixit Opening Tools (1)

Step 1 — Battery

- To protect the device and yourself, make sure your device is completely powered down before disassembling. Disconnect all external devices before starting any tear down process.
 - Turn the device and lay it upsidedown on a flat surface so the base of the computer is facing upwards.

- Identify the two (2) sliding lock mechanisms on either side of the battery and slide them towards the center.
 - The sliders are located at the back of the device on the side where the display hinges are.
- The slider closest to the optical drive (CD reader) clicks open but the opposite slider has a spring.

- Pull the battery slightly up and out to remove.
- if the battery doesn't pop out, the sliders weren't pushed in far enough. Push the sliders towards the center until the battery pops out.

Step 4 — Bottom Cover

- Remove the rubber feet on the bottom of the device to access all the screws.
 - There are two rubber feet, one on each side of the battery compartment.

- Unscrew the twelve 9 mm JIS #0 screws on the back of the device.
- Gently remove the optical drive (CD reader) to more easily separate the base.

Step 6

 Unclip the keyboard surface from the base using an iFixit opening tool around the entire border.

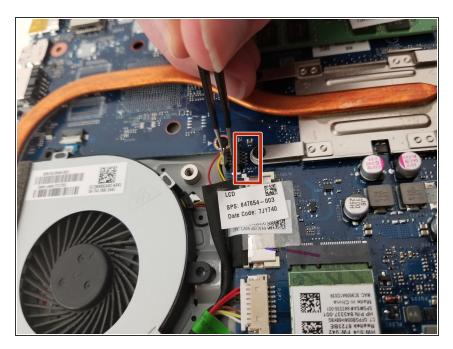

- Separate the base of the computer from the component assembly.
 - i The optical drive can be placed in the base where it corresponds to prevent misplacing it.

Step 8 — Fan

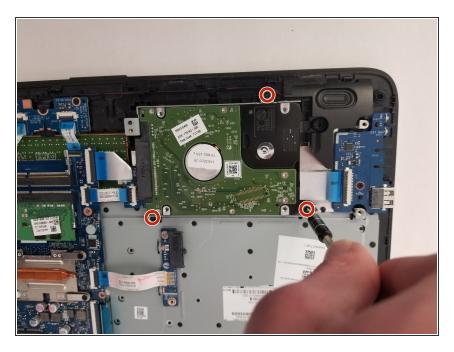

- Remove the two 6.5 mm JIS #0 screws holding the cooling fan to the base.
 - The base is the side by the heatsink, which is made of copper.

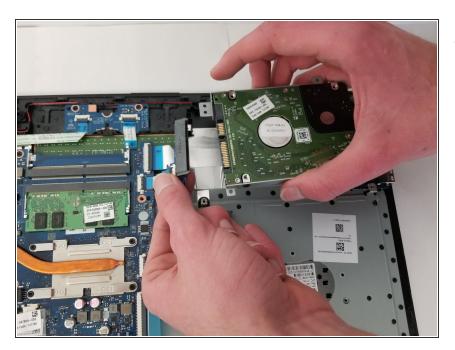

- Unplug the fan cable from the motherboard.
 - (i) The fan can now be removed.

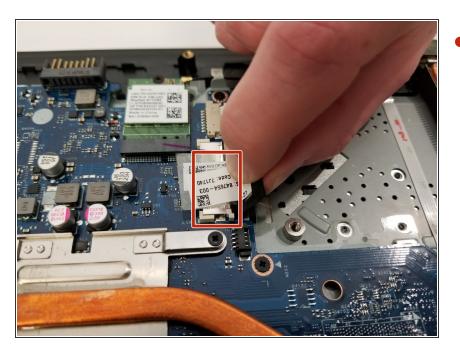

Step 10 — **Motherboard**

 Remove the three 3 mm JIS #0 screws from the hard drive.

 Unplug the hard drive from the motherboard.

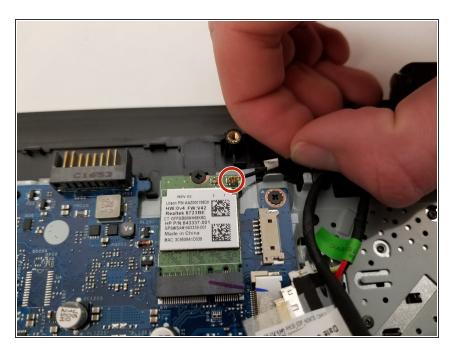

- Unplug display from the motherboard.
- The connection is under a sealing sticker; peel up the sticker to unplug the connection.

 Unplug the power port from the motherboard.

Step 14

 Unplug the display wire from the wireless adapter.

 Remove the single screw from the wireless card and gently remove the drive.

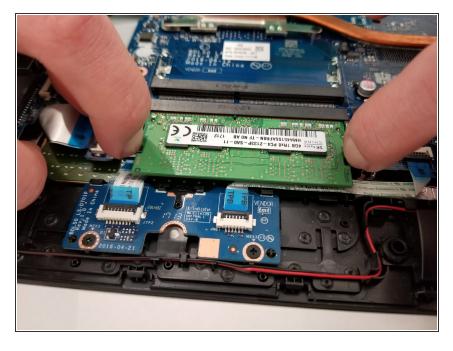

Step 16

Unplug the keyboard from the motherboard.

 Unplug the optical drive connection from the motherboard.

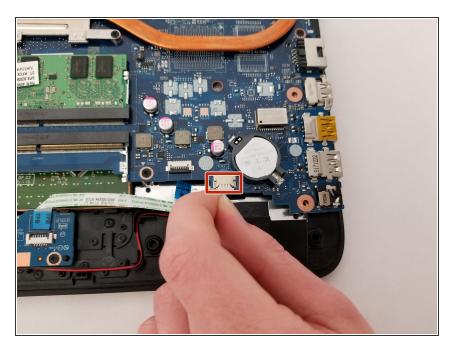

- Remove the memory chip from the motherboard by pushing the clips away from the chip.
 - (i) The chip will pop out once the clips are pulled far enough apart.
 - This is to access the touch-pad wires.

 Unplug both (2) wires for the touchpad from the motherboard.

Step 20

 Unplug the speakers from the motherboard.

 Unplug the power button from the motherboard.

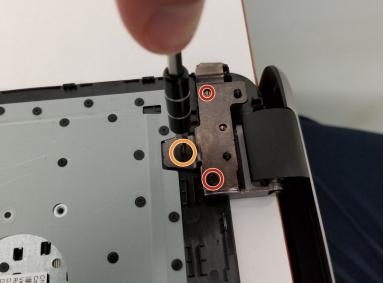

- Unscrew the four 3mm JIS #0 screws that secure the motherboard.
 - Once all the screws are removed, the motherboard can be removed by simply lifting it up.

Step 23 — Keyboard and Touchpad

 Remove the two 3mm JIS #0 screws that secure the touchpad board.

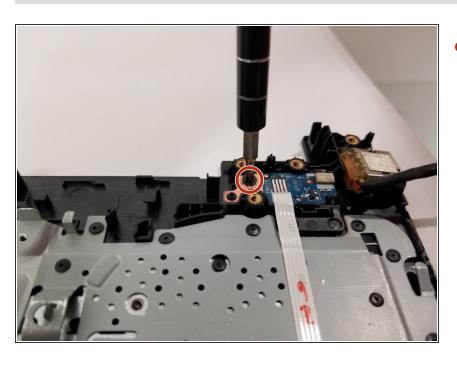

- Remove the display by unscrewing the four 3mm JIS #0 screws.
- Remove one 2mm JIS #0 screw.

• Lift the power port from its cradle.

Step 26

 Unscrew the one 3mm JIS #0 screw holding the power button board to the device.

 Unscrew the two 3mm JIS #0 screws that hold the optical drive (CD-reader) connection to the device.

- Remove the two (2) speakers located on the botten edge of the keyboard cover.
 - (i) Along the edge that the touch-pad board and hard drive is located.

 Make sure there is nothing else attached to the keyboard cover so all that remains is the keyboard and touch-pad.

To reassemble your device, follow these instructions in reverse order.
