

# Keyboard Logitech K800 Battery replacement

Keyboard off / Red blinking LED syndrome.

Written By: Maxime Veber

## INTRODUCTION

If your keyboard blinks red and refuses to work (this may happen by alternate before becoming definitive) it's probably because you need to change the batteries. I received a keyboard with broken batteries so it can actually happen DAY 1.

Another issue may be a broken cable inside at the battery level.

### TOOLS:

- [Tornevis Cruciforme PH1](#) (1)

### PARTS:

- [Rechargeable AAA Batteries](#) (1)

## Step 1 — Open the battery location

- Once the battery location open, replace the original battery with new **rechargeable batteries**.

To re-assemble your keyboard, reverse instructions.
