Dell Inspiron 13 7378 Battery Replacement

One of the common defects that Dell Inspiron 13...

Written By: Michelle Reyes

INTRODUCTION

One of the common defects that Dell Inspiron 13 7378 is currently facing has been the complete shut off or pitch-black screen that pops out of nowhere. That may have a lot to do with the battery and could also potentially mean it's damaged.

Before following this guide make sure the device is powered off as this can be a dangerous hazard. You will then be able to safely replace your battery and return your computer back to its proper function.

TOOLS:

- Phillips #00 Screwdriver (1)
- iFixit Opening Picks (Set of 6) (1)

PARTS:

- Dell WDX0R Replacement Battery (1)

Step 1 — Back Cover

● Set the laptop with its underside facing up for improved accessibility.

Step 2

● Using a Phillips #00 screwdriver, extract the nine 3 mm screws located on the back of the laptop.

Step 3

- Carefully pry open the back of the back of the laptop using opening picks.

- Carefully raise and detach the back cover from the laptop.

⚠ Exercise caution to prevent damaging or cracking the device's back cover.

Step 4 — Battery

- Remove the four screws from the battery using a Phillips #00 screwdriver.

Step 5

- Disconnect the battery's black connector from the motherboard.

Step 6

- Remove the battery from the laptop.

Replace the back cover to complete the process.
