

Huawei Mate 9 Lite batterie replacement

This guide describes how to change the battery...

Written By: Malte Kerl

INTRODUCTION

This guide describes how to change the battery of the Huawei Mate 9 lite.

TOOLS:

Suction Handle (1)

iOpener (1)

Tweezers (1)

PARTS:

Huawei P10 Plus Ersatzbatterie (1)

Step 1 — Opening the smartphone

- Heat the back of the device (e.g. with a warm bottle).
- Then use a suction cup to lift the back a bit and insert a pick into the gap. Guide the pick once around the smartphone and loosen the glue, then remove the back cover.

 **Note the cable for the fingerprint sensor.**

-  The back is made of a quite flexible plastic. Thus, you cannot easily destroy the back
-  There is a sticker with the serial number on the back. This has to be removed so that the suction cup holds well.

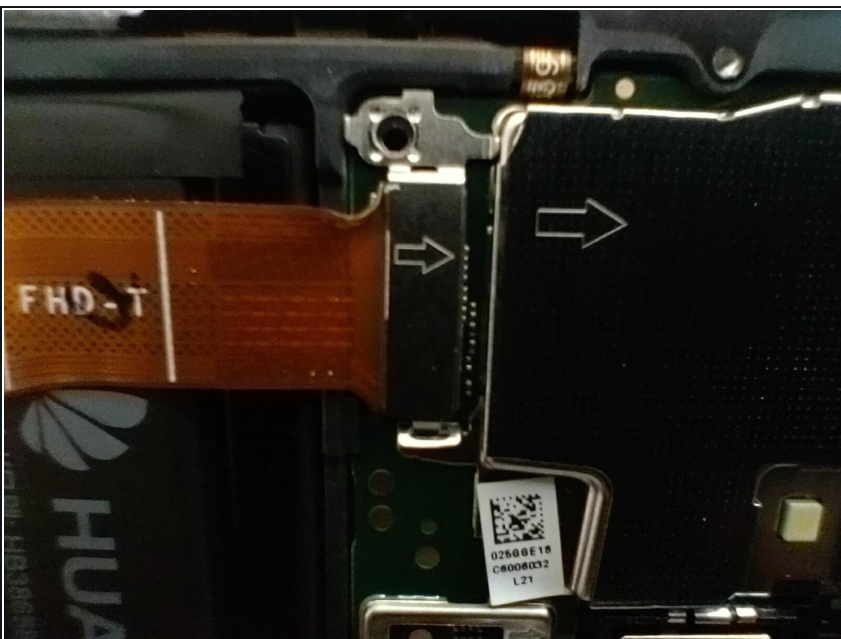

Step 2 — Disconnect cable from battery

- Loosen the two screws that fix the cable on the right above the battery.
- Disconnect the cable and the cables attached to the same connector from the mainboard.

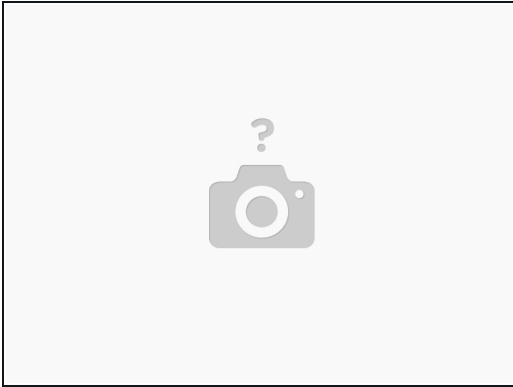

⚠ Use a non-conductive object for this.

Step 3

- Now release the cable on the left side.
- First, carefully bend the metal bracket that holds the cable on the right side a little to the side and then loosen the screw that holds the cable.
- Then carefully pull the cable upwards.

Step 4 — Separating the battery

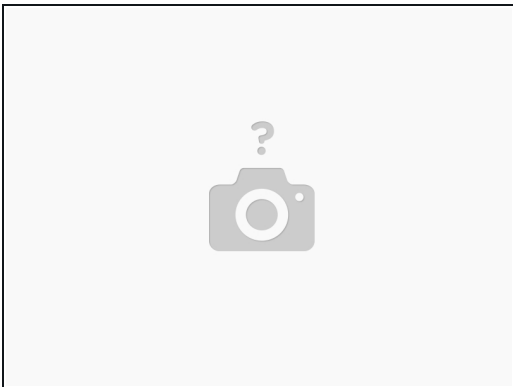

- The battery is very firmly glued to the case.

⚠ Be careful when removing it!

- ⓘ I put the phone on a hot water bottle with the display facing down. This is not the best solution, but it works.

Step 5 — Assemble the smartphone

- To reassemble the smartphone, you first need to remove the adhesive residue that is present around the frame.
- Then follow the last steps backwards.
- ⓘ Do not bend the metal bracket for the left cable back until you have already screwed the cable.

Follow the instructions in reverse order to reassemble the device.
