

Motorola RAZR2 v9m Battery Replacement

Replace a dead RAZR2 v9m battery.

Written By: John T Roller

INTRODUCTION

Use this repair guide to replace a battery in a Motorola RAZR2 v9m.

Step 1 — Battery

- Push the rear cover toward the hinge of the RAZR2. The panel will slide about 3 mm.

Step 2

- Pinch the top and bottom edges of the panel and pull it away from the RAZR2.
- ⓘ The rear panel uses four small hooks to hold it in place. If the panel will not easily pull away, slide the panel more toward the hinge.

Step 3

- Gently pull the white plastic tab to lift the battery away from the RAZR2.
- ⓘ The white plastic tab is attached to the phone. Only pull it enough to expose the edges of the battery.

Step 4

- To remove the battery, grasp its edges and pull away from the phone.
- ⓘ When installing a new battery, be sure the metal contacts on the phone line up with the ones on the battery.

To reassemble your device, follow these instructions in reverse order.
