INTRODUCTION

This guide will provide instructions on how to safely power down the Dell Precision T3400.

Step 1 — Power down the PC.

- If your PC is on, shut it down by navigating to the window tab in the bottom left corner, selecting the power icon, and then selecting shut down.
 - Unplug the PC from the wall.
 - Disconnect the power cable from the tower, unplug keyboards, monitors, or any other devices, and remove any USB devices.
- ⓘ Press the power button after completely shutting down the PC. This will "ground" the motherboard, preventing any short circuiting from occurring.

To reassemble your device, follow these instructions in reverse order.
