TOOLS:

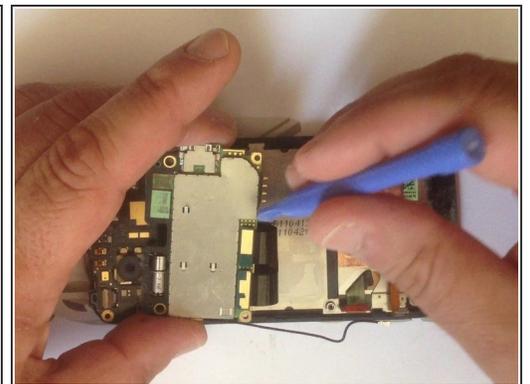

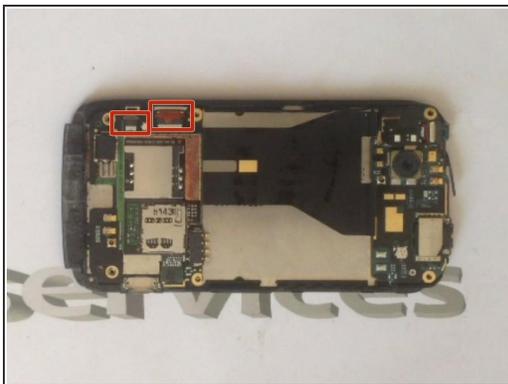

- [iFixit Opening Tools](#) (1)
 - [Plastic Cards](#) (1)
 - [Tweezers](#) (1)
 - [T5 Torx Screwdriver](#) (1)
-

Step 1 — Touch Screen / Digitizer

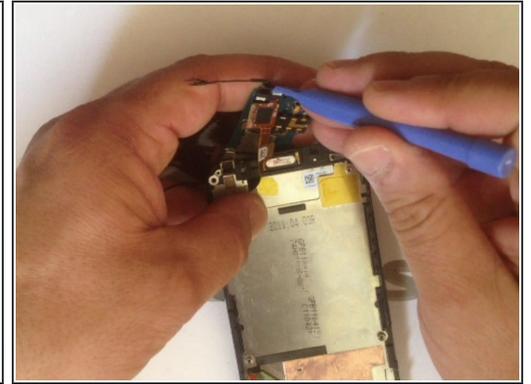

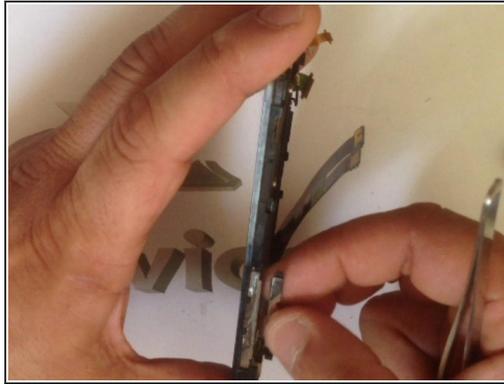

- Unscrew 8x screws and remove the back cover using a plastic tool.

Step 2

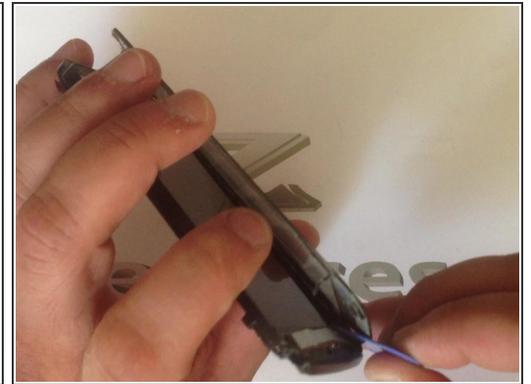

- Disconnect the LCD display cable and the menu buttons cable.
- There are another two cable connector between the main board and the additional upper board.

Step 3

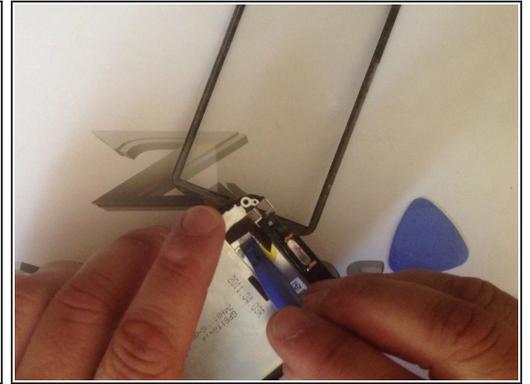

- In case to remove the upper board, unscrew the screw and release the power button flex cable and the volume up/down flex cable.
- In another side of the board is the touchscreen flex cable connector.

Step 4

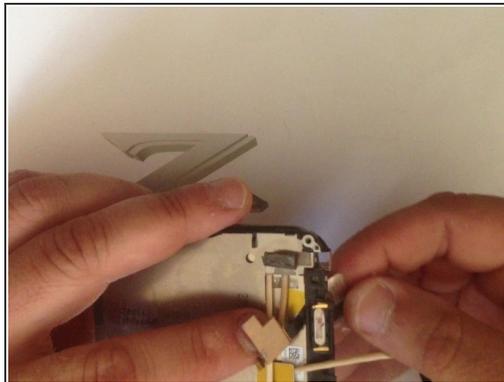

- Use hot air to warm the touchscreen.
- With a plastic tool start to separate the touchscreen.
- Gently release the menu flex cable from the touch screen.

Step 5

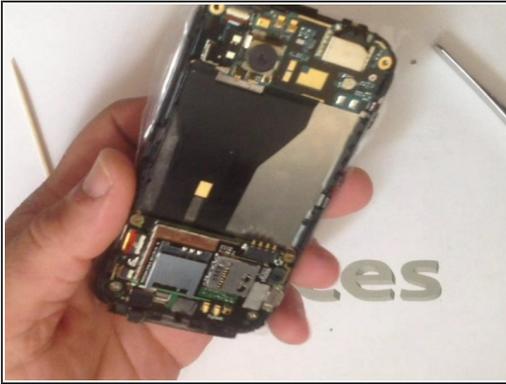

- The touchscreen flex cable goes between the LCD display and the upper case / housing.
- Again use a plastic tool and hot air to free up the cable.
- Work carefully to avoid breaking the display.

Step 6

- I use toothpicks and hot air to make place for the cable of the new spare part.

Step 7

- It's time to assemble the phone.
