INTRODUCTION

Hello all, today we will repair a water damaged phone.

it's a simple cell phone and quite easy to repair.

enjoy

TOOLS:

T6 Torx Screwdriver (1)

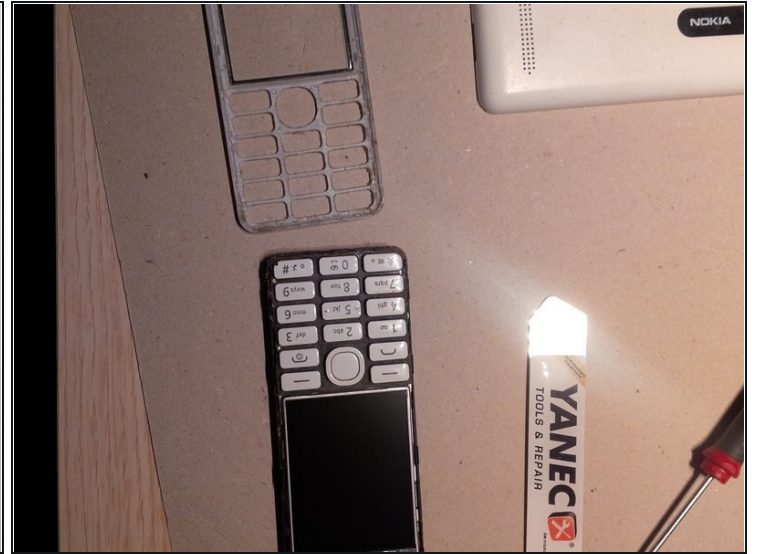

Distilled Water (1)

Step 1 — Water Damage on main board of Nokia 206 RM873

- Remove back cover & battery.

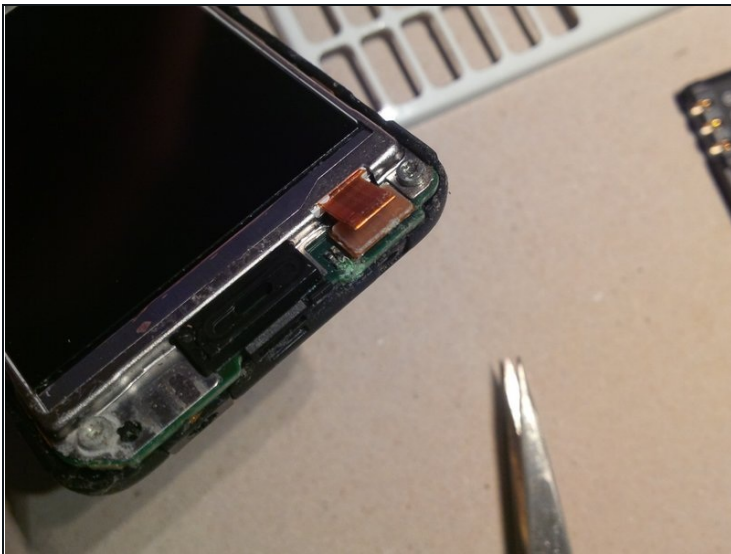

Step 2

- Remove the front case by prying it open. You will hear clicks.

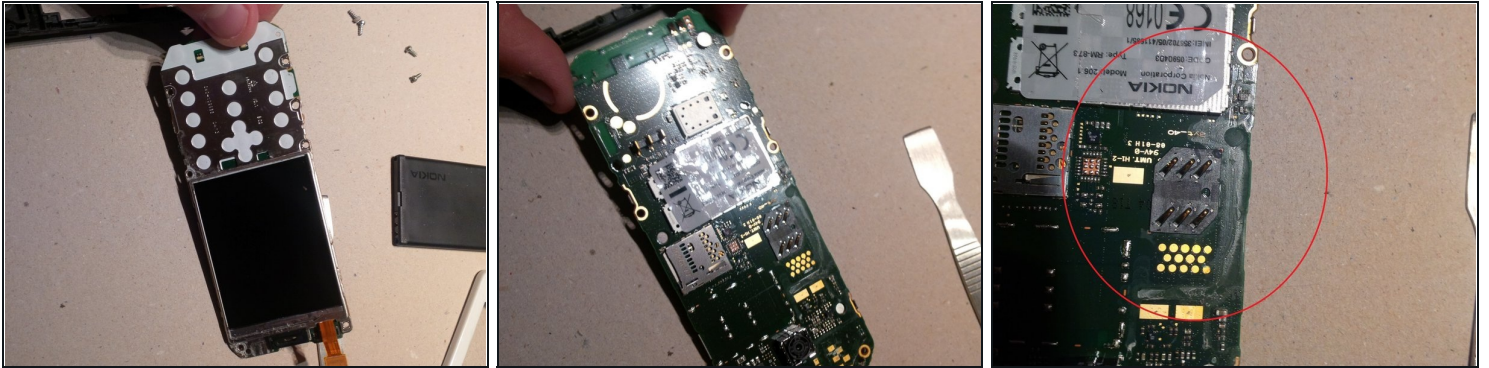

⚠ Be careful with taking off screen if you use a spudger.

Step 3

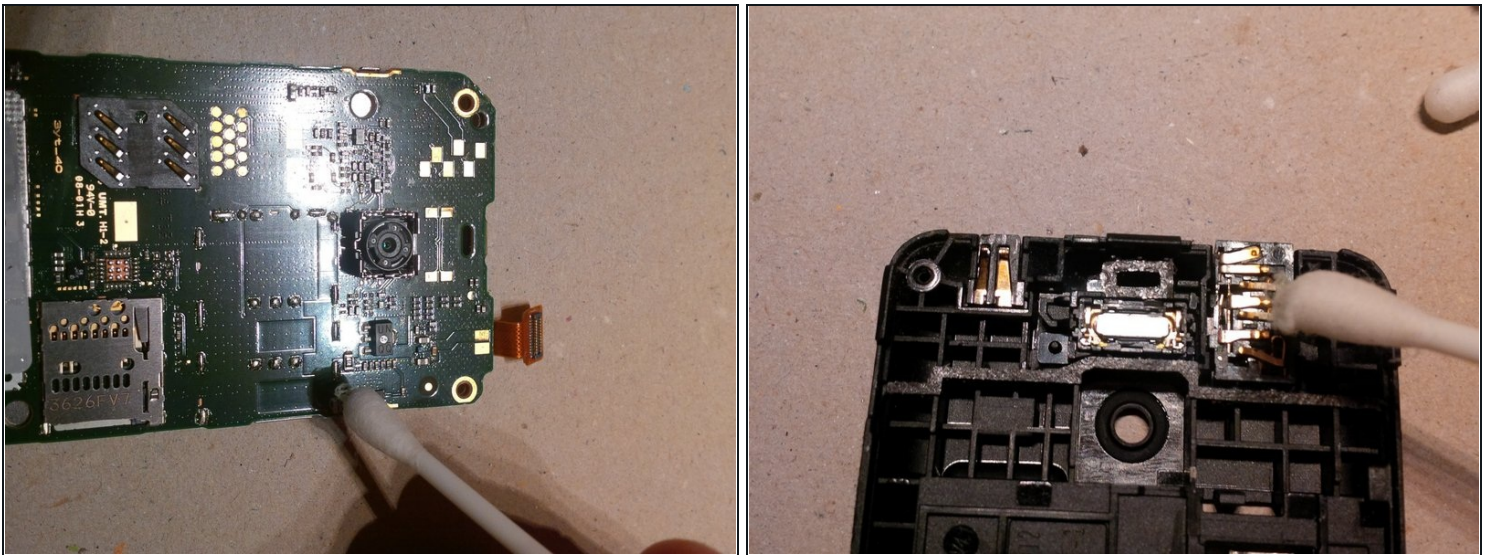

- Use a Torx screwdriver to remove the screen screws.
- Use a spudger or tweezers to remove the connector of the LCD screen.

Step 4

- The PCB board had water damage, see this in picture 3.
- To remove the corrosion, dab a cotton swab with a little distilled water on the corroded area, the corrosion will disappear.

Step 5

- How and where to use the cotton swabs.

To reassemble your device, follow these instructions in reverse order.
