

# BLU Advance 4.0 Screen Replacement

This guide will teach you how to replace your BLU Advance 4.0's screen in the event of it being damaged.

Written By: Jon Sclar

---

## INTRODUCTION

The guide is for replacing the phone's external screen.

---

### TOOLS:

- [Phillips #00 Screwdriver](#) (1)
-

## Step 1 — Removing the back cover

- With the back camera on the top side and facing you, find a notch on the bottom right side of the phone.
- Unclip the cover by raising it up from the notch and sliding a flat rigid tool along the edge.

## Step 2 — Revealing the motherboard

- Remove the battery.
- Remove 3 screws from each side with a Phillips 00 screwdriver.
- Unclip the screen by sliding a flat rigid tool between the black and the blue side-band.
- Pop off the blue side-band to be exposed to the motherboard.

This document was generated on 2020-11-30 03:37:33 AM (MST).

### Step 3 — Separating motherboard from screen

- Remove 2 black plastic buttons from each side, exposing metallic padding.
  - Gently pry the metallic padding off the motherboard with a flat rigid tool.
  - Carefully separate the clip-on tabs while lifting the motherboard away from the screen.
- ⚠ Forcefully separating the motherboard from the screen can further damage your device.

### Step 4 — Screen

- The screen connector is located near the back camera and charger port.
  - Remove the attached screen by gently tugging the cord that connects it to main frame.
- ⚠ Pull gently to avoid damaging the connected cable.

## Step 5

- After screen removal, you should be left with the old screen and a plug-in tab .
- Leave the motherboard and inner screen in one piece.
- ⓘ If the inner screen is cracked, replacing the outer screen is useless.

## Step 6 — Placing in new screen

- Work backwards by carefully sliding in the new screen's plug-in tab into the screen connector.
- ⚠ The phone will not have sensitivity if the plug-in tab is damaged.

To reassemble your device, follow these instructions in reverse order.
