INTRODUCTION

If you have a jammed button or if you simply want to replace a part on your Nikon Coolpix P100 camera, then this guide is perfect for you! This guide will help users easily replace a broken back button on your Nikon Coolpix P100 camera. The only required tools you need are a Phillips #00 Screwdriver and a iFixit Opening Tool.

Before using this guide make sure that the camera is powered off!

TOOLS:

[Phillips #00 Screwdriver](#) (1)

[iFixit Opening Tool](#) (1)

Step 1 — Back Buttons

- Turn the front of the camera toward you.

Step 2

- On the left side of the camera, remove two screws using a Phillips #00 screwdriver.

Step 3

- On the right side of the camera, remove the first visible screw.

Step 4

- Lift the HDMI and A/V OUT cover to access the hidden screw.

Step 5

- Flip the camera upside down and remove the seven marked screws.

Step 6

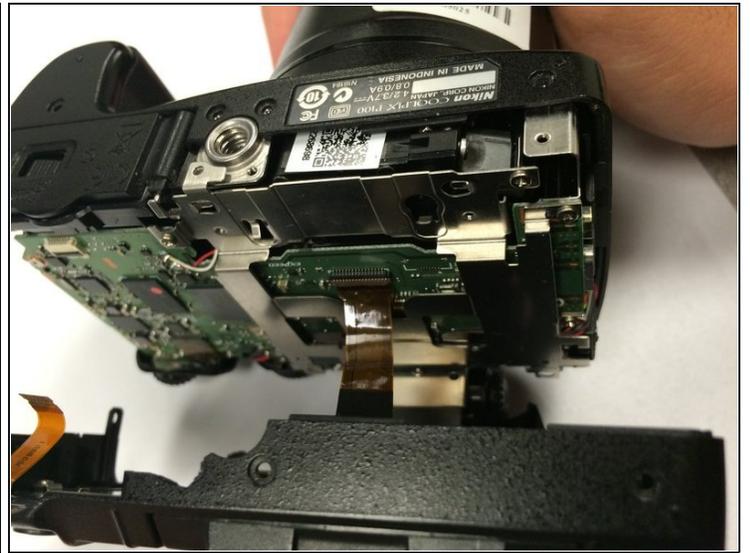

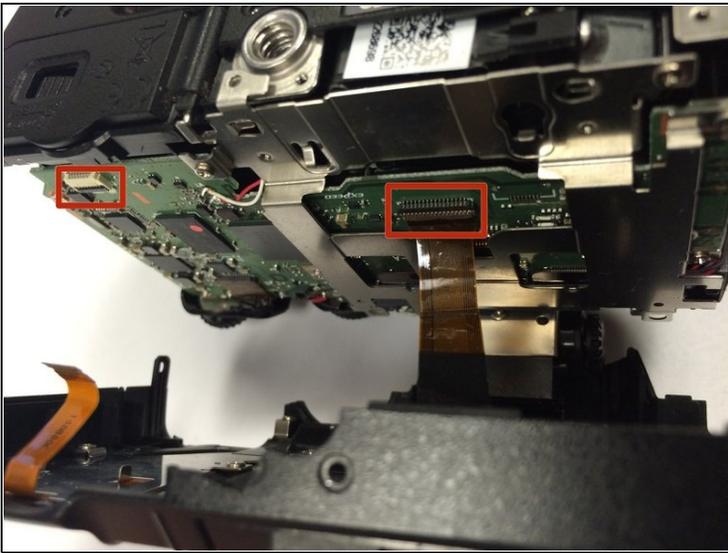

- Remove the two screws hidden underneath the display panel.

Step 7

- Use a plastic opening tool to gently loosen up the sides of the camera.

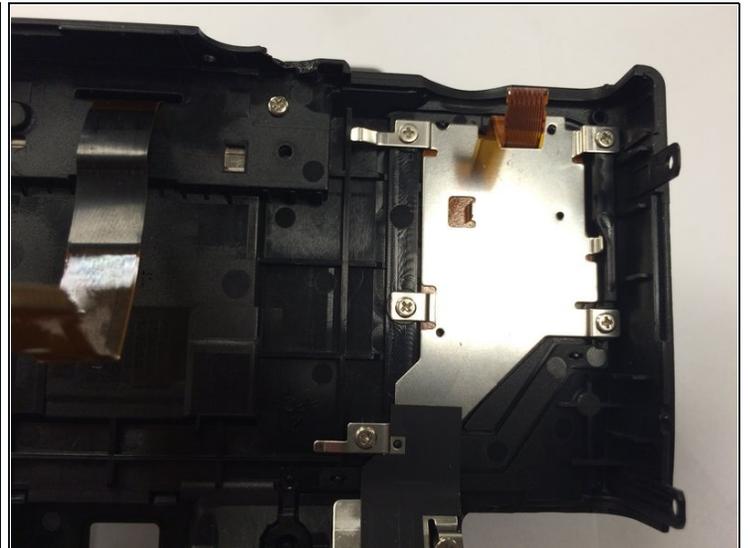

Step 8

- Carefully open the camera.

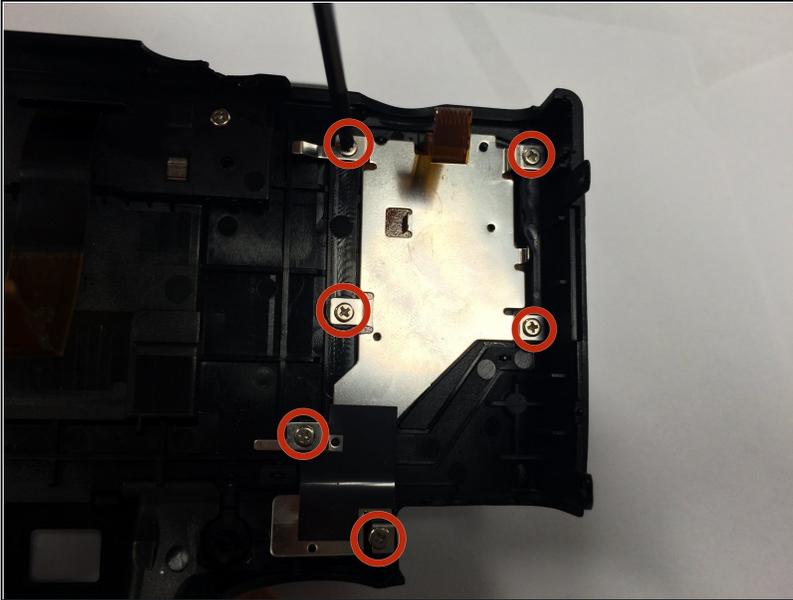

⚠ There are two ribbon cables when opening the camera. Make sure to properly detach them before proceeding.

Step 9

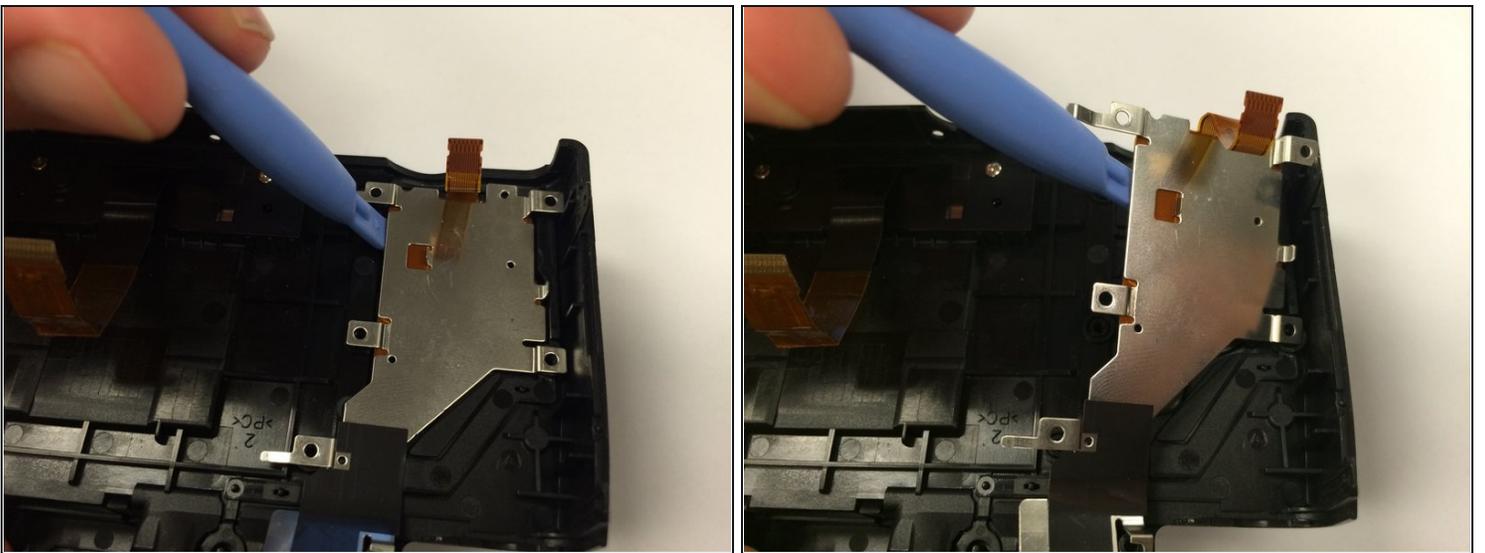

- This is the cover that houses the back buttons of the camera. Turn it around.

Step 10

- Remove the six indicated screws.

Step 11

- Use a plastic opening tool to lift the metal plate and set it aside.

Step 12

- Turn the cover around and push against the buttons.

Step 13

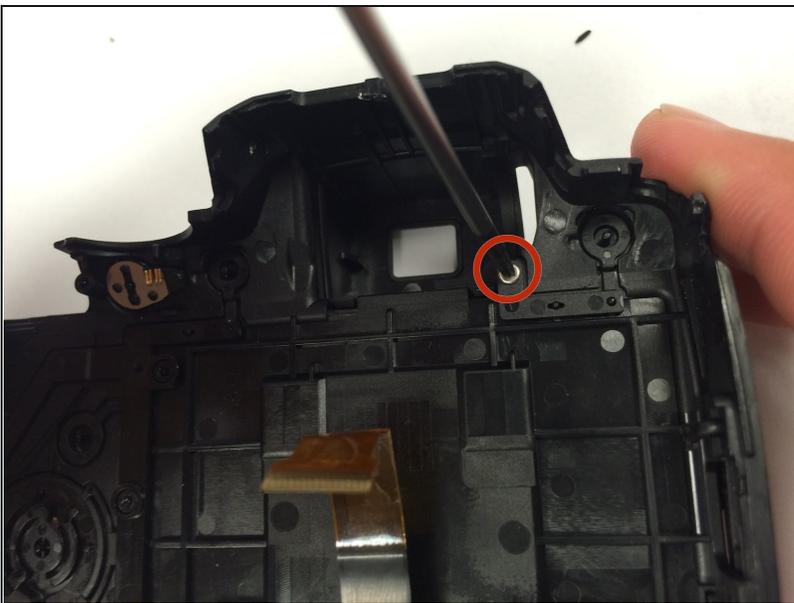

- Now you have partial access to one set of buttons.

Step 14

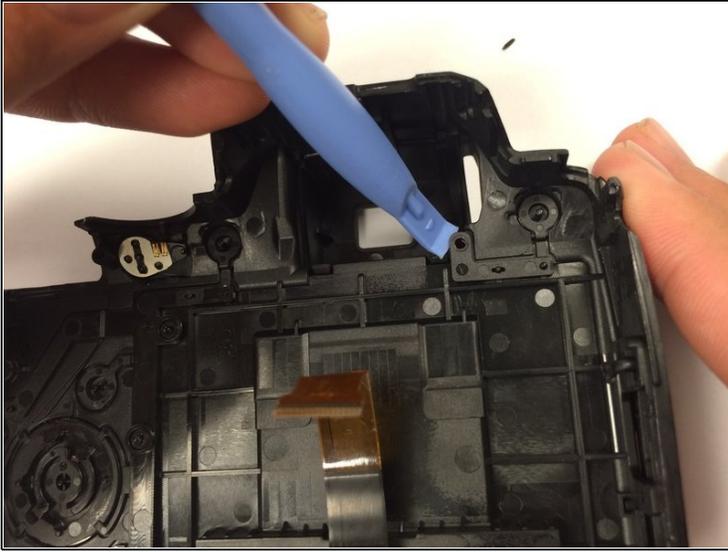

- Find the last set of removal buttons on the bottom left.

Step 15

- Remove the screw.

Step 16

- Use a plastic opening tool to remove the button.

To reassemble your device, follow these instructions in reverse order.
