

# HKC P776A Wifi Antenna Replacement

Written By: Ryan Gornati

### 🖌 TOOLS:

Spudger (1) iFixit Opening Tool (1) Soldering Iron (1) Lead-Free Solder (1) Desoldering Pump (1)

### Step 1 — Separating Digitizer and Case

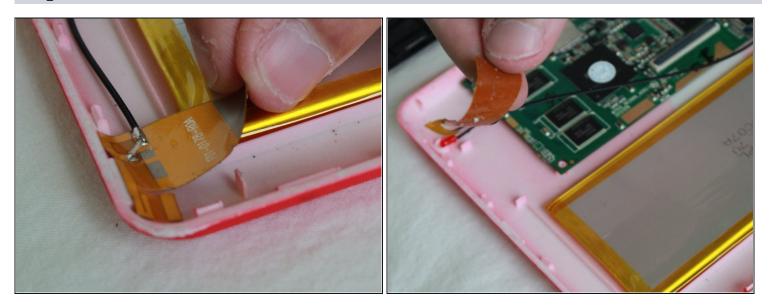

- Insert the plastic opening tool between the digitizer and the case.
- Place the spudger in the gap created by the plastic opening tool to assist in separation.

# <image>

• Slide the spudger along the perimeter of the device to fully separate the two pieces.

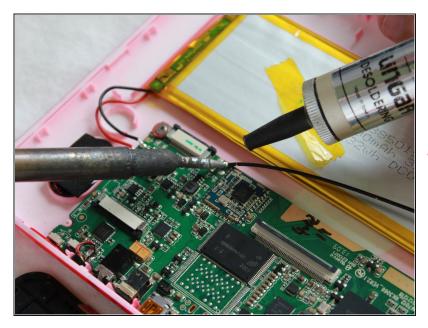

### Step 3 — Wifi Antenna

• Peel off the tape that is attaching the wifi antenna to the case.

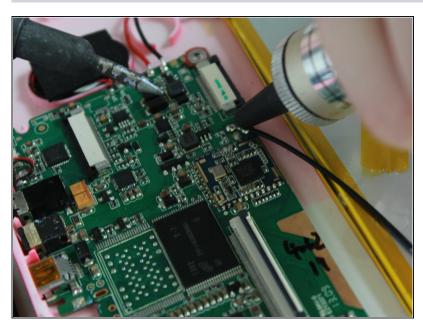

## Step 2

### Step 4

- Using the soldering iron, heat up the solder that is attaching the antenna to the motheboard.
- The heat from the soldering iron may cause personal injury or damage the internal components of the tablet.

### Step 5

- Suck up the leftover solder using the <u>desoldering pump</u>.
- Remove the wifi antenna from the motherboard.

To reassemble your device, follow these instructions in reverse order.
