INTRODUCTION

You will need a T5 and a PH000 tip from the iFixit's kit.

If the camera is taking fuzzy pictures it may be due to debris blocking the lens.

🔧 **TOOLS:**

Phillips #000 Screwdriver (1)
T5 Torx Screwdriver (1)

Step 1 — Batteries

- Slide the battery cover to the right.

- ⓘ The hinge is on the left side of the cover which will allow the cover to stay attached.

Step 2

- Slide the second cover (yellow) to the right (similar to the outer cover). This will allow the batteries to be exposed.

Step 3

- Remove the batteries by gently tipping the camera.

Step 4 — How To Clean Nikon Coolpix S30 Lens

● Remove the four screws the hold the back of the case to the rest of the camera.

Step 5

● Remove the left screw from the bottom of the camera first. This can be done using the same T5 tip.

● Unscrew the screw on the right using a different attachment: PH000 (it is a small Phillip's head)
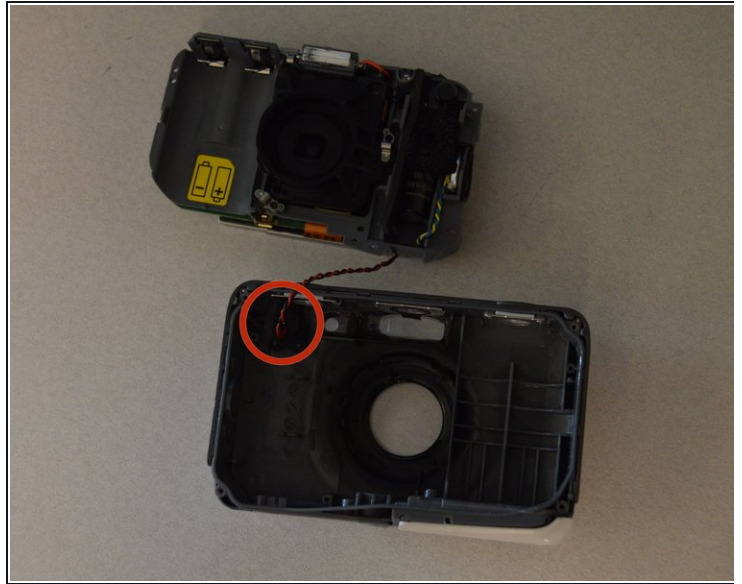

Step 6

- Remove back case from the rest of the camera carefully.
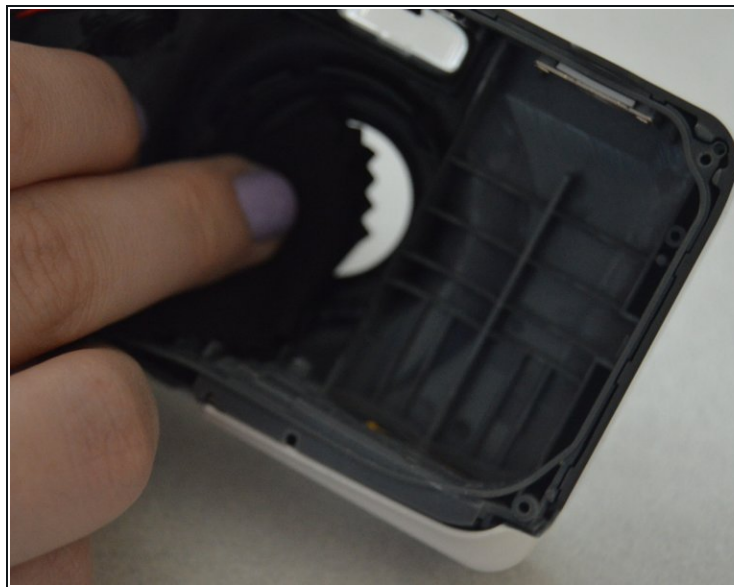

Step 7

- Remove the three screws the secure the motherboard to the front case.

Step 8

- Remove the motherboard from the front case.

- Leave the red and black wire attached but lay the piece in front of the case.

Step 9

- Wipe the lens and the clear plastic on the front case to remove debris.

To reassemble your device, follow these instructions in reverse order.
