Step 1 — Motherboard

⚠️ ***Be sure to always remove the battery from the camera before disassembling to avoid permanent damage.**

- There are a total of 6 (3mm) external screws that will need to be removed; 2 on the left side, 2 on the bottom, and 2 on the right side.

- 1.) Remove the 2 screws on the left side

- 2.) Remove the 2 screws on the bottom of the camera.

- 3.) Remove the 2 screws on the right side of the camera.

Step 2

- Use spludger tool or small flathead screw driver to gently lift and remove back face plate.

Step 3

- After removing exterior screws, gently lift off the front face plate.
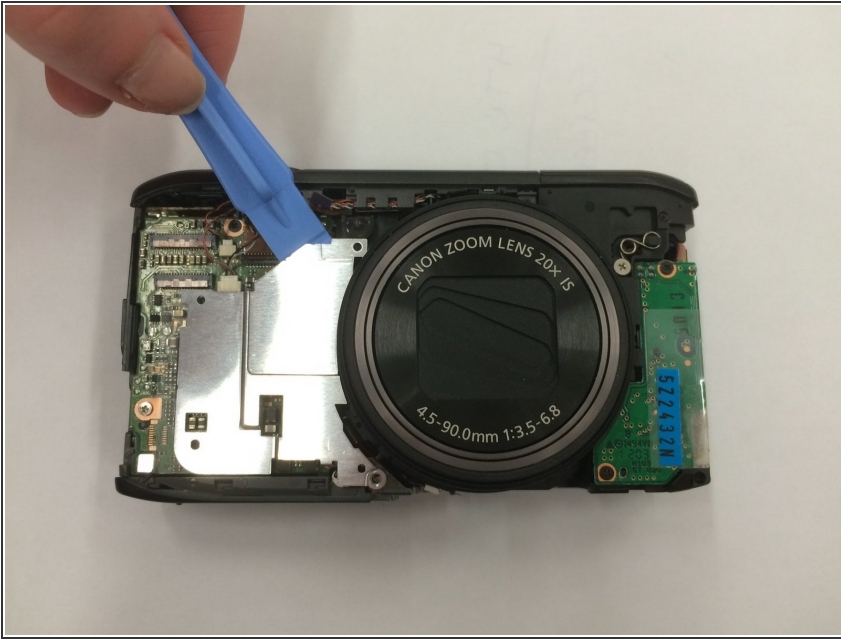

Step 4

- After removing the front faceplate you will find 4 (3mm) screws on the interior.

- Remove all 4 interior screws.

Step 5

- Remove 1 (6 mm) Screw from the bottom of the silver metal plate. The screw is also silver

Step 6

- With blue spludger tool gently lift the metal plate from the face of the camera.

- **The plate is held by a piece of double sided tape so there will be a bit of resistance.**

Step 7

- Remove 3 (3 mm) screws from the top surface of the motherboard.

- You will notice that there is one on the top, and 2 on the bottom in a triangular shape.
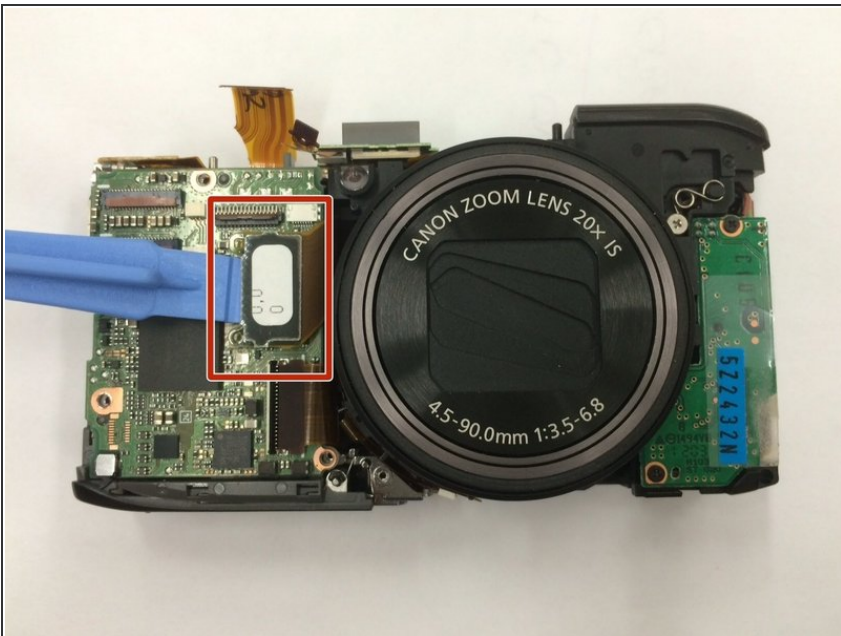

Step 8

- Gently remove the ribbon cable from the top of the motherboard with a pair of tweezers.

- ⚠️ **Be careful during this step not to rip or tear the cable.**

Step 9

- Use the blue spludger tool to gently unplug the last ribbon cable that is attached to the motherboard.
