# INTRODUCTION

In this guide you will be required to take off the back cover of the device in order to locate and remove the battery. You will need to use a soldering iron to accomplish this task.
Because this task requires the use of a soldering iron, prior experience with soldering/desoldering will be beneficial.
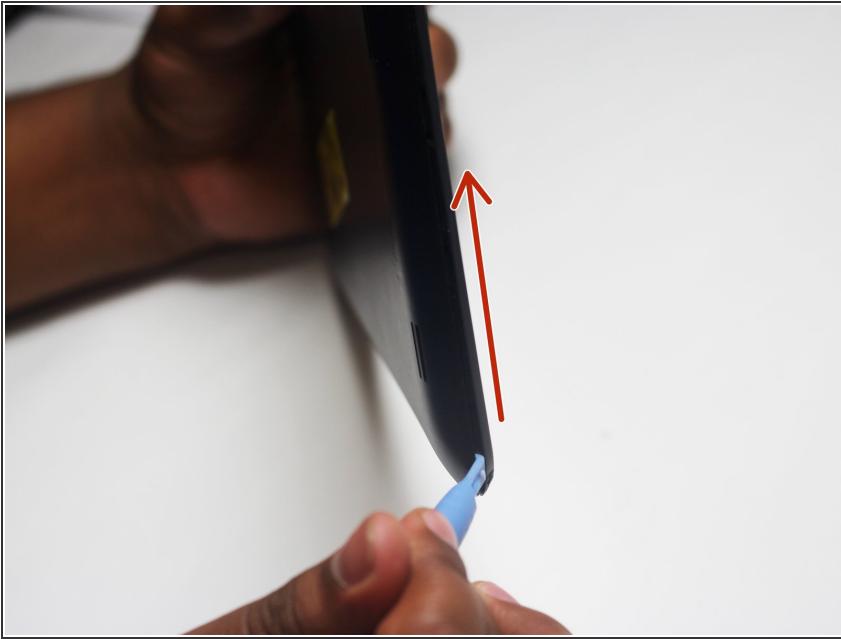

## 🔧 TOOLS:

- iFixit Opening Tools (1)
- Spudger (1)
- iOpener (1)
- Safety Glasses (1)
- Soldering Iron (1)

## Step 1 — Back Cover

- Wedge the plastic opening tool between the back cover of the device and the front panel.

- You will hear a *snapping* sound as the cover is separated from the body of the device.

## Step 2

- Slide the opening tool along the seam between the front panel and the back cover to un-clip the remaining connections around the device.

- Again, you will hear a *snapping* sound as the cover is separated from the body of the device.
## Step 3

- Lift the back cover from the body of the device to expose the internal components.

## Step 4 — Battery

- Remove the Battery
  - The battery is secured to the back panel with tape and glue.
  - Peel back the tape around the battery and discard it.
  - Tear through the adhesive holding the battery by using the spudger tool.

## Step 5

- Desolder the 2 Battery Wires
  - The Battery has two wires connected to the motherboard (one black and one red).
  - ⊞ If you're unfamiliar with soldering or desoldering check out this guide.
  - ⚠ Be sure to wear protective eye wear. The soldering iron will become extremely hot and a potential danger, so make sure you are aware of your surroundings.

To reassemble your device, follow these instructions in reverse order.
