Step 1 — Outer Casing

- At the top of the outer frame, insert the plastic spudger into the groove in the center.

- Lever the frame gently until it pops out of the case.

Step 2

- Use a Phillips #00 screwdriver to remove the four screws around the screen.

Step 3

- Gently pull from both ends of the casing to separate the front and back panels.

⚠ Do not force the pieces apart wider than the length of the connecting wires, or you will damage the wiring.

Step 4

- Gently unplug the white cable connector using either your fingers or tweezers.
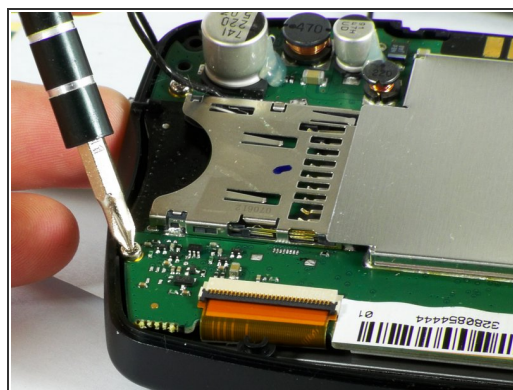

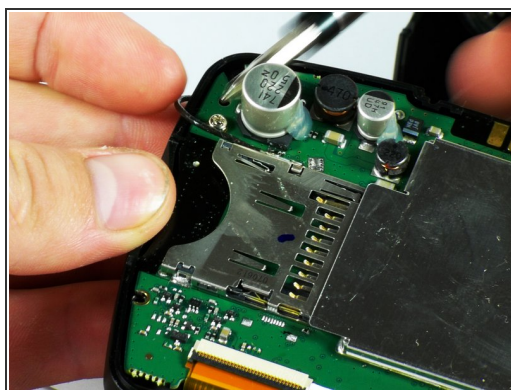

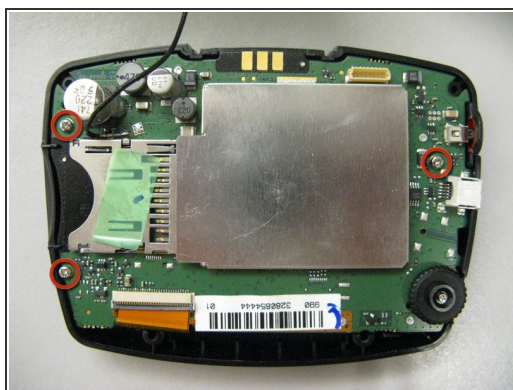

Step 5

- Carefully expose both halves of the device.

⚠ Be sure not to pull the two halves apart further than the black wire can reach.
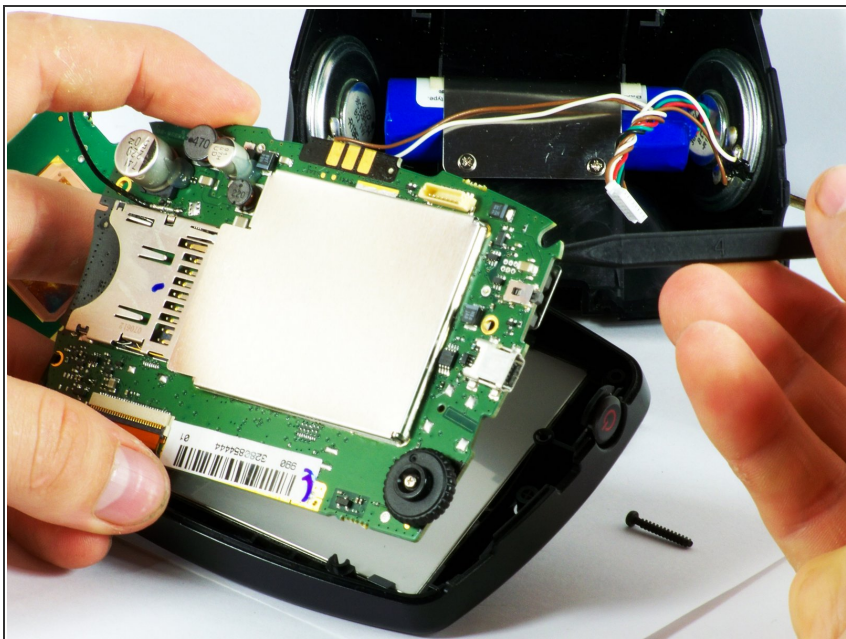

Step 6 — Screen

- Remove the three screws holding the motherboard in place.

Step 7

- Use the spudger to lift up the motherboard.
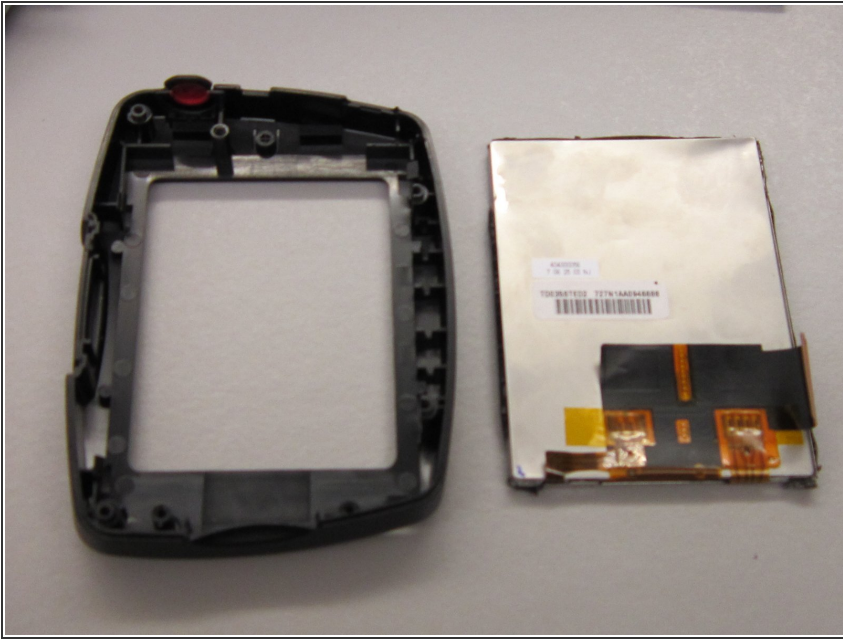

Step 8

- To remove the ribbon cable, lift the black latch using the spudger tool.

- Separate the connection using either your fingers, tweezers, or the spudger.

Step 9

- Slide the spudger under the two flexible tabs located on the right and left sides of the bottom of the screen.

- Rotate the spudger outward until the tabs are no longer holding the screen.

- When reassembling, slide the bottom of the screen under the two permanent tabs.

- Push the screen out from the front.
