

# PSP 300xc Analog Stick Replacement

Replacing the analog stick on your PSP300xc

Written By: Matthew Newsom

## INTRODUCTION

Anyone who has played N64 or GameCube knows how bad a limp analog stick can suck. Replace your PSP 300xc, and never settle for loose sticks again!

---

### TOOLS:

- [Phillips #00 Screwdriver](#) (1)
- [Spudger](#) (1)

### PARTS:

- [Sony PSP 3000 Analog Stick](#) (1)

## Step 1 — Battery

- Press the button securing the battery door to the PSP 300xc, and lift the battery door off.
- Lift the battery out of the PSP.

## Step 2 — Front Case

- Use a spudger or your fingernail to remove the warranty sticker stuck to the inside of the battery tray

### Step 3

- Remove four Phillips screws from the back of the PSP.

### Step 4

- Remove two Phillips screws from the top of the PSP.

## Step 5

- Remove a single screw from the bottom edge of the PSP.

## Step 6

- Insert a spudger between the front case and PSP, and slide the spudger along the perimeter of the front case to remove it.

## Step 7 — LCD

- Remove a single Phillips screw securing the home bar to the PSP 300xc.

## Step 8

- Push the home bar to the right about 1cm to release a tab, and begin to lift the right end of the home bar slightly.

**⚠** Do not attempt to remove the home bar yet, it is still attached to the PSP 300xc.

## Step 9

- Insert a spudger under the LCD, beside the black plastic tab.
- Push the LCD to the left and pry up to release the left edge of the LCD from under the plastic tab.

## Step 10

- Insert a spudger under the LCD, beside the black plastic tab.
- Push the LCD to the right and pry up to release the right edge of the LCD from under the plastic tab.

## Step 11

- Rotate the LCD away from the PSP to reveal the LCD and home bar ribbon cables.
  - Use your fingernail or the edge of a plastic opening tool to flip up the retaining flap on the following four ZIF connectors:
    - Home bar cable
    - Microphone cable
    - LCD display data cable
    - Touchscreen cable
- ⚠ Be sure you are prying up on the retaining flap, not the socket itself
- After flipping up the locking tabs on all four connectors, use your fingers or a spudger to gently pull the cables straight out of the connectors.

## Step 12

- Remove the LCD from the PSP 300xc.

## Step 13 — Home Bar

- Lift the home bar up as high as it will go, but not so high that the wires disconnect.
- ⚠ Try to bend the small tab under the silver rim as little as possible in the following steps. The more you bend, the more likely it will snap.
- Twist the home bar counter clockwise while carefully lifting it further. The left edge has to lift over the black plastic frame to allow it to rotate.
- The home bar should now lift out of the PSP 300xc.

## Step 14 — Trigger Buttons

- Remove both trigger buttons by lifting them off the PSP 300xc.

## Step 15 — Analog Stick

- Using the flat end of a spudger, peel the 'L' trigger contact pad up from the case.

## Step 16

- Using a fingernail or spudger, flip up the retaining flap on the d-pad and 'L' trigger ribbon cable.
- ⚠ Be sure you are prying up on the retaining flap, not the socket itself
- Lift the black plastic bracket along with the d-pad contact pad, disconnecting the ribbon cable as you lift.

## Step 17

- Remove a single Phillips screw securing the analog stick to the PSP 300xc.

## Step 18

- Use your fingernail or the edge of a plastic opening tool to flip up the retaining flap on the analog stick ribbon connector.
- Lift the analog stick out of the PSP 300xc, disconnecting the ribbon cable as you remove it.

To reassemble your device, follow these instructions in reverse order.
