## INTRODUCTION

To remove the laptop's speakers, many components within the laptop need to be removed. This is a guide to do so.

---

### TOOLS:

- [Phillips #00 Screwdriver](#) (1)
  - [iFixit Opening Tool](#) (1)
  - [Spudger](#) (1)
-

## Step 1 — Battery

- Flip the computer so the bottom is facing up with the battery away from you.

**⚠ Turn off the computer and disconnect the charger.**

## Step 2

- Slide the battery switch to the left until the battery unlatches from the base of the laptop.

### Step 3

- Lift the battery from its compartment away from the laptop.

### Step 4 — Bottom Panel

- Loosen the two 5.7 mm screws on the bottom panel using a PH00 screwdriver.
- ⚠ The screws do not come out of the panel due to small washers. Do not try to remove the screws completely.

## Step 5

- Use the metal spudger all around the panel to pop it up from the base.

**⚠** When working with electronics, it's important to choose a tool that's ESD-safe to avoid accidental damage to the device. The regular black nylon spudger or a plastic opening tool should be used whenever possible.

**i** Using your finger is acceptable but not entirely recommended. Be gentle if you choose to use your hands.

## Step 6

- With your hands, lift the panel completely off the base of the laptop.

## Step 7 — RAM

- Slide the two latches away from the RAM to unhook it.

## Step 8

- Gently slide the RAM out from the laptop.

## Step 9 — Hard Drive

- Use the PH 00 screwdriver to unscrew the 2.5 mm screw to the right of the hard drive.

## Step 10

- Pull the triangular blue tab to disconnect and remove the hard drive. You can see the word 'Pull' on the cover.

## Step 11 — Wireless Card

- Unlatch the two antenna cable connectors from the wireless card.

## Step 12

- Remove the two 2.5 mm screws in the wireless card with a PH00 screwdriver.
- ⓘ You may have to gently bend the cables away from the wireless card to remove the screws

## Step 13

- Gently disconnect the wireless card from the laptop.

## Step 14 — CD Drive

- Using the PH 00 screwdriver, remove the screw left of the CD drive.

## Step 15

- Slide the CD drive out from the exterior of the laptop.

## Step 16 — Keyboard

- Using a PH 00 screwdriver, remove the screw located next to the wireless card.
- ⓘ You can remove the wireless card for this process but it is not necessary.
- ⓘ This screw has a small keyboard icon next to it.

## Step 17

- Flip the laptop over and open it.

**⚠** The components beneath your computer may be loose and fall out when you flip the laptop. Be careful when turning it over.

## Step 18

- Insert a **plastic** spudger or similar pry tool, beneath the keyboard, near the "insert" key, and pop the keyboard up from the laptop.

**⚠** When working with electronics, it's important to choose a tool that's ESD-safe to avoid accidental damage to the device. The regular black nylon spudger or a plastic opening tool should be used whenever possible.

- Starting at the opening you just created, run your fingers around the outside of the keyboard separating it from the rest of the computer.

**Only lift the keyboard up a few inches because it is attached to the laptop by a ribbon cable.**

## Step 19

- Slightly angle the keyboard back so the ribbon connector underneath it is visible.
- Remove the ribbon cable by using your fingers to pull up and away from the connector.

## Step 20

- With the ribbon cable detached, you can now completely remove the keyboard.

## Step 21 — Speaker

- With the laptop bottom facing up, locate the rubber plug on the right side of the computer.
- Use a metal splunger to remove the plug.

## Step 22

- Remove the ten 6.7 mm screws using a PH00 screwdriver.
- Remove the five 3.4 mm screws using a PH00 screwdriver.

## Step 23

- Flip the computer over and open it.
- Detach the two purple ribbons from the ribbon connectors.
- Unscrew the six 4.6 mm screws using the PH00 screwdriver.

## Step 24

- Use the plastic opening tool to pry out the front panel around the entire computer.

## Step 25

- Gently lift the front panel away from the computer.

## Step 26

- Locate the red and black speaker cables connecting the speakers and detach them from the two holders.

## Step 27

- Pull the speaker cables out of their connectors.

## Step 28

- Slide the left speaker out from under the blue motherboard.

## Step 29

- Lift the right speaker directly up and remove it from the computer.

To reassemble your device, follow these instructions in reverse order.
