INTRODUCTION

Replacing the keyboard on your laptop can be necessary if your keyboard is no longer responding. You will need a nylon or metal spudger. Make sure that the power is off before continuing.

🔧 TOOLS:

- Spudger (1)

Step 1 — Keyboard

- Rotate the laptop so the back side is facing you.

- From this side, you should be able to see both of the gaps where the two plastic materials meet.

Step 2

- Wedge the nylon or metal spudger inside the gap and pry open the two plastic parts.
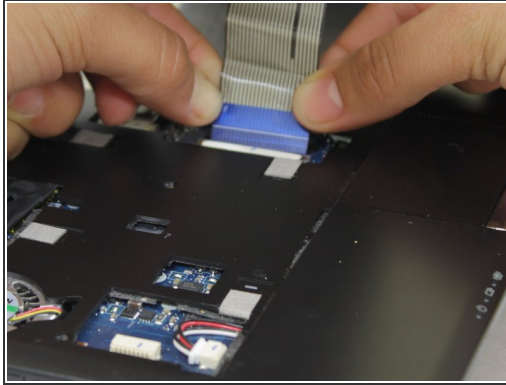

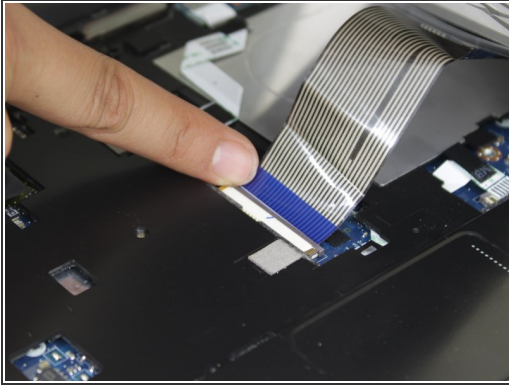

Step 3

- Open the laptop.

- Place the nylon or metal spudger under the top half that is loose and pull up to pry it open.

Step 4

- Pull up on the loose component to remove.

- As you lift the keyboard, you should be able to see a strip connected to the laptop.

Step 5

- Remove the strip by pulling both sides of the blue strip out.

- Lift and remove the keyboard from the laptop.

To reassemble your device, follow these instructions in reverse order.
