

APS Tech 101629 Power Switch Replacement

This guide will show how to replace a worn out power switch.

Written By: Alexis Weckel

INTRODUCTION

This repair guide will guide you through the steps to removing and replacing the power switch of your APS Tech 101629 CD-Drive.

First the external casing, and channel switch will need to be removed.

TOOLS:

- Phillips #1 Screwdriver (1)
- Spudger (1)
- Tweezers (1)
- iFixit Opening Tools (1)

Step 1 — External Casing

• Pry all four of the plastic feet off the bottom of the enclosure using the iPod opening tool.

Step 2

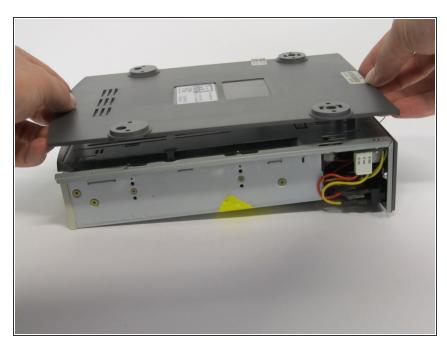

Unscrew the four screws previously covered by the feet with a Phillips #1 screwdriver.

Step 3

- Flip the device right side up.
- Gently slide the casing upwards and off the hard drive.

Step 4

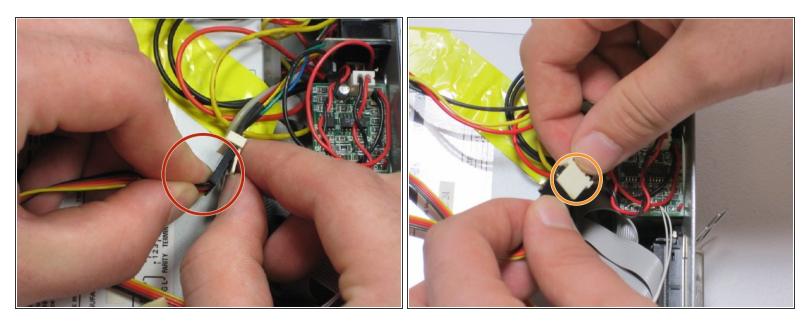

- Flip device upside down again.
- Gently pry the bottom gray casing away from the device.

Step 5

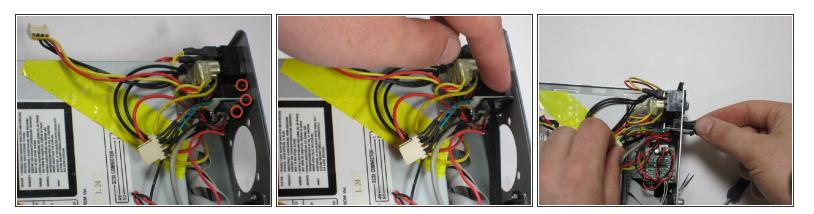

- Rotate so the back of the device is facing you.
- Gently pry the back casing away.
- When the back casing is removed, the fan will become loose.

Step 6 — Channel Switch

- Find the conjoined ID cable wires that are colored black, orange, and yellow.
- Lift white portion of cable wires to disconnect it.

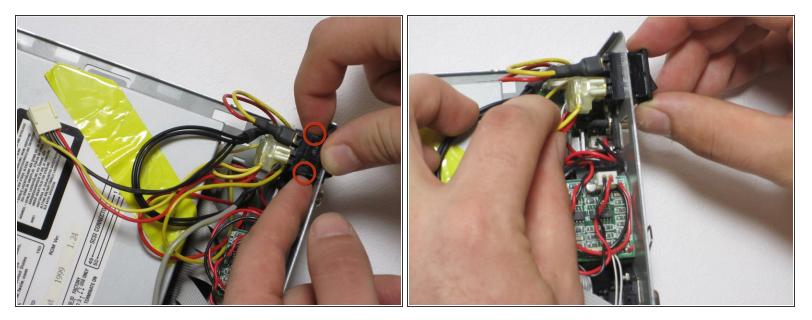

Step 7

(i) At this point, the fan is loose and can be easily moved but not disconnected.

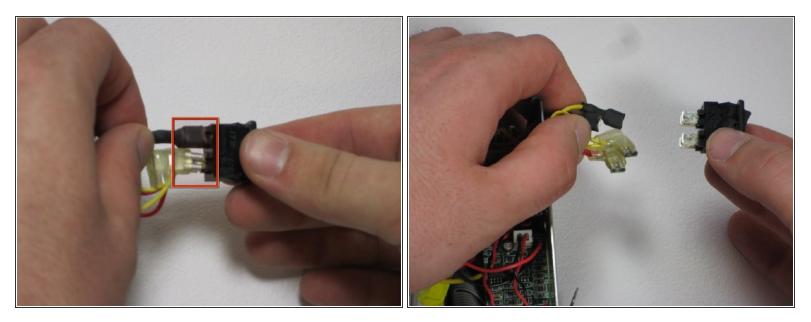

- Using the spudger, depress the pressure holders at all four corners of the fan.
- Take out the fan and its cords, by pulling it outward from its cavity within the device.

Step 8 — Power Switch

- Depress 2 pressure holds on each side of the power switch.
- Press out the back of the device.

Step 9

- Remove all four 4 connections from the power switch.
 - Remember that the straight connections are on the far side, while the L-shaped connections are on the near side, and that both yellow connections are on top. This is helpful for reassembly.
- (i) These are very hard to get off, use patience and wiggling.

To reassemble your device, follow these instructions in reverse order.
