

HTC Ozone LCD Display Replacement

Written By: Marco Jokada

 **TOOLS:**

[iFixit Opening Tool](#) (1)

[Tweezers](#) (1)

Step 1 — Rear Battery Cover

- Flip the phone over to have the rear cover facing up.
- The camera lens should be towards the top of the phone.

Step 2

- Slide the cover up, towards the top of phone, to unlock the battery cover.
- Lift the cover off phone and remove it.

Step 3 — Battery

- Use your finger to push the top of the battery downwards and lift the battery out of the phone.

Step 4 — Frame

- Remove the six Torx #5 screws that are securing the rear frame.

Step 5

- Pry the frame open, releasing the eight plastic tabs around the edge of the frame, using the plastic opening tool.
 - ① A [plastic card](#) can be used instead of the plastic opening tool.

Step 6 — Motherboard

- Remove the single Phillips #0 screw that is securing the motherboard to the front case of the phone.

Step 7

- Pry the motherboard away from the front of the plastic case using a plastic opening tool.

⚠ Be careful not to break the ribbon cable when prying away the motherboard.

Step 8

- Remove the plastic cover from the LCD display and the motherboard.
⚠ The Motherboard and the LCD are still attached together.

Step 9 — LCD Display

- Remove the gray tape securing the ribbon cable.

Step 10

- Remove the yellow tape securing the connector lock.

Step 11

- Carefully lift the black lock to release the ribbon cable, using the plastic opening tool.

Step 12

- Pull the ribbon cable upwards, disconnecting it from the Motherboard.

Step 13

- Lift the Motherboard away from the LCD display.

To reassemble your device, follow these instructions in reverse order.
