INTRODUCTION

You will learn how to remove the motor from the base to check for frayed wires and/or loose screws.

TOOLS:

- [T10 Torx Screwdriver](#) (1)
 - [Phillips #1 Screwdriver](#) (1)
-

Step 1 — Base Disassembly

- Take out the three 15 mm Phillips #1 screws.
- Remove the 15mm T10 screw.
- ☑ Place the 4 screws on the magnetic mat.

Step 2

- Remove the gray base by lifting upwards and placing to the side.

Step 3 — Motor

- Remove the three 15 mm Phillips #1 screws.
- ⓘ Place screws on magnetic mat.

Step 4

- Remove the motor by gently lifting up. Be careful with the cords, as they may be tangled.
- This is the entire motor for the Ninja. If you have access to a spare motor, simply swap out the motors.

To reassemble your device, follow these instructions in reverse order.
