

MacBook Pro 15" Unibody Early 2011 Battery Replacement

Replace the battery in your Early 2011 MacBook Pro 15" Unibody.

Written By: Walter Galan

INTRODUCTION

Use this guide to replace a worn-out battery. If your battery is swollen, [take appropriate precautions](#).

TOOLS:

- [Phillips #00 Screwdriver](#) (1)
- [Spudger](#) (1)
- [Tri-point Y0 Screwdriver](#) (1)

PARTS:

- [MacBook Pro 15" Unibody \(Early 2011 Late 2011 Mid 2012\) Replacement Battery](#) (1)

Step 1 — Lower Case

- Remove the following ten screws securing the lower case to the upper case:
 - Three 13.5 mm (14.1 mm) Phillips screws.
 - Seven 3 mm Phillips screws.

✦ When removing these screws, note how they come out at a slight angle. They must be reinstalled the same way.

Step 2

- Using both hands, lift the lower case near the vent to pop it off two clips securing it to the upper case.
- Remove the lower case and set it aside.

Step 3 — Battery Connector

- ✦ For certain repairs (e.g. hard drive), disconnecting the battery connector is not necessary but is recommended as it prevents any accidental shorting of electronics on the motherboard. If you do not disconnect the battery connector, please be careful as parts of the motherboard might be electrified.
 - Use the edge of a spudger to pry the battery connector upwards from its socket on the logic board.
 - i It is useful to pry upward on both short sides of the connector to "walk" it out of its socket.

Step 4

- Bend the battery cable slightly away from its socket on the logic board so it does not accidentally connect itself while you work.

Step 5 — Battery

- Remove the two 7.4 mm Tri-point screws securing the battery to the upper case.

Step 6

- Carefully peel the battery warning label rounded end (the one without glue) off the upper case between the battery and the optical drive to reveal an additional Tri-point screw.
 - Remove the last 7.4 mm Y0 Tri-point screw securing the battery to the upper case.
- ⚠ Do not remove the label from the battery.**

Step 7

- Use the attached plastic pull tab to remove the battery from the upper case.
- ☑ If you're installing a new battery, you should [calibrate](#) it after installation:
 - Charge it to 100%, and then keep charging it for at least 2 more hours. Next, unplug and use it normally to drain the battery. When you see the low battery warning, save your work, and keep your laptop on until it goes to sleep due to low battery. Wait at least 5 hours, then charge your laptop uninterrupted to 100%.
 - If you notice any unusual behavior or problems after installing your new battery, you may need to [reset your MacBook's SMC](#).

Compare your new replacement part to the original part—you may need to transfer remaining components or remove adhesive backings from the new part before installing.

To reassemble your device, follow the above steps in reverse order.

If you notice any unusual behavior or problems after installing your new battery, you may need to [reset your MacBook Pro's SMC](#).

Take your e-waste to an [R2 or e-Stewards certified recycler](#).
