Step 1 — Back Casing

⚠ Make sure device is powered off.

- Wedge the plastic opening tool anywhere in the seam between the back casing and screen.

- Slide the plastic opening tool along the sides and corners of the seam of the device while it separates from the screen.

ⓘ You will hear the popping sound of the plastic connections separating from the device.
Step 2

- Lift the back casing away from the screen.

- Set casing aside.

Step 3 — Battery

- Gently peel the tape that is covering the cable connections going to and from the battery and set tape aside.

- (i) This will expose the cable connections in preparation for disconnecting the cables and battery.

Step 4

- Locate battery cable connection.

- Pull gently on cable that connects the battery to the motherboard.

- ⓘ Cable will stay attached to battery but be removed from motherboard.

- ⓘ If pulling gently doesn't loosen cable, wiggle connection while pulling gently.

Step 5

- Slide the nylon spudger gently underneath the battery.

- Using the nylon spudger, gently pry battery from adhesive on metal base.

- ⚠️ Do not puncture or bend battery.

- Working around the battery, pry up all the sides to remove the battery from the metal base.

- ⓘ The adhesive is very strong. Separating the battery from the metal base may be difficult.

To reassemble your device, follow these instructions in reverse order.
