# INTRODUCTION

Replacing the keyboard is an easy repair that is unfortunately necessary in certain cases. This guide will take you through the process of removing your keyboard step by step.

## TOOLS:

Phillips #2 Screwdriver (1)

iFixit Opening Tool (1)

### Step 1 — Disassembling Apple IIc Cover

- Remove the six 19 mm long screws with a #2 Phillips head screwdriver.

## Step 2

- Release the catch by pushing it in using a plastic opening tool.
- ⓘ The catch is off-center, but in line with the middle of the speaker underneath.

## Step 3

- Slide the case toward the ports on the back, then grip under the catch and pull up while moving toward the ports to remove.

## Step 4

- Lift the handle straight up to remove.

## Step 5 — Keyboard

- Tilt the keyboard up while detaching the ribbon connection by pulling it straight up. You may have to wiggle the connector sideways to loosen it.

**⚠ Be careful not to force the ribbon while pulling it out to avoid tearing. Do not try to pull the ribbon out by pulling the keyboard as it may cause tearing.**
