INTRODUCTION

If you find that your computer is responding slow, this guide will show you how to access and remove the RAM.

🔧 TOOLS:

- Phillips #1 Screwdriver (1)

This document was generated on 2020-11-21 10:57:14 PM (MST).

Step 1 — Battery

- Power down the computer and unplug the power adapter.

Step 2

- Flip the laptop upside down. Locate the two latches on both sides of the battery.

This document was generated on 2020-11-21 10:57:14 PM (MST).

Step 3

- Slide the latch on the right outwards, releasing the lock. The latch stays unlocked once moved.

- Simultaneously slide the latch on the left outwards while pulling the battery towards you.

⚠ Do not touch the metal connectors on the laptop and the battery.

Step 4 — Back Panel Removal

- Remove the single captive screw on the back panel with your Phillips #1 screwdriver.

This document was generated on 2020-11-21 10:57:14 PM (MST).
Step 5

- Pry the removal tab up. You will feel and hear the first clip release, popping up slightly.

- Work your way around the border of the panel, releasing the rest of the clips.

- Once all clips are released, lift the cover up and pull towards you.

Step 6 — RAM

- Using your fingers, spread the spring tabs holding the top stick of RAM in place.

- Once the tabs are spread apart, the stick of RAM will pop up.

- Remove the first stick of RAM by pulling out along the same angle the RAM stick springs up.

Step 7

- Repeat the same procedure to remove the second stick of RAM.

To reassemble your device, follow these instructions in reverse order.
