Step 1 — Acer Aspire 7736Z-4809 Repair Preparation

- Unplug and power off the laptop.
  - (i) If the battery is still connected to the laptop, remove the battery.

Step 2

- Flip over the laptop so that the back panel of the laptop is facing up.
Step 3 — Back Panel

- Use the Phillips #1 screwdriver to remove the eight 6.5 mm Phillips #1 screws.
  - ⓘ Only the four screws in the center are removable, the four along the edges are held in by rivets but can be loosened.
Step 4

- Remove the back panel of the laptop.

Step 5

- Connect a grounding cord to a metal interface on the laptop.

- ⚠ Ground the laptop to prevent static electricity from damaging the electrical components inside the laptop.
Step 6 — Wireless Module

- Remove the white antenna of the wireless module.
 - ⓘ Use tweezers if you do not prefer using hands.

Step 7

- Remove the black antenna of the wireless module.
  - (i) Use tweezers if you do not prefer using hands.

Step 8

- Use the Phillips #1 screwdriver to remove the two 4.8mm Phillips #1 screws.
