INTRODUCTION

This is a very simple replacement that acts as a prerequisite for hard drive replacement. It involves just the use of a Phillips #0 screwdriver and small plastic opening tool.

🔧 **TOOLS:**

- Phillips #0 Screwdriver (1)
- iFixit Opening Tools (1)

Step 1 — Back Panel

- Flip the laptop upside down so that the battery is facing away from you.

- ⓘ Battery removal is not necessary to complete this guide.

Step 2

- Locate the three 3 mm Phillips #0 screws on the back panel.

- Remove each screw using a small Phillips #0 screwdriver.

Step 3

● Using a small plastic opening tool, pry off the back casing starting at a point closest to you and working around the perimeter of the case.

To reassemble your device, follow these instructions in reverse order.
