

Parrot Hydrofoil Orak Propellers Replacement

Replace the propellers on the Parrot Hydrofoil Minidrone to get your drone flying again.

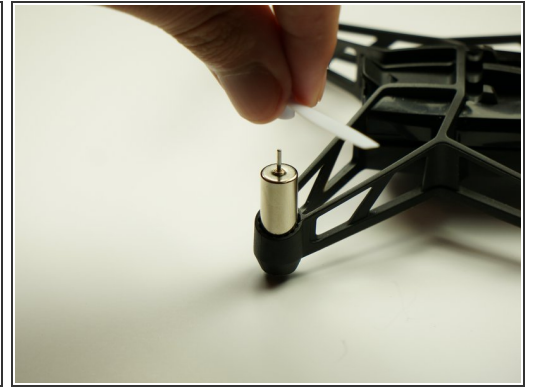

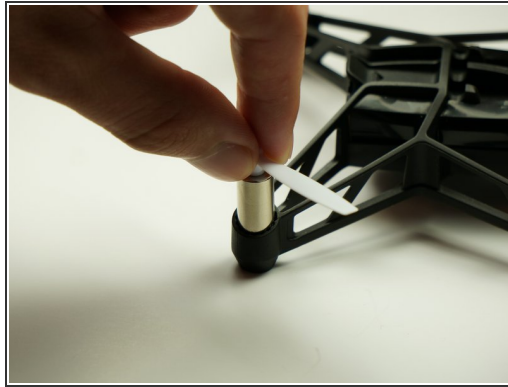

Written By: Jacob Munson

INTRODUCTION

The Parrot Hydrofoil Minidrone has four propellers located at each corner of the body. This guide will detail how to replace those components.

Step 1 — Propellers

- Locate the propellers of the same angle, each diagonally across from each other.
- Locate the propellers of the opposite angle, located diagonally across from each other.
- Grip each white propeller firmly and pull up to remove.
- ⓘ Removing the propellers may require a decent use of force.
- ⚠ When replacing the propellers make sure to place the corresponding set in the right position, diagonally across from each other to ensure proper liftoff.

To reassemble your device, follow these instructions in reverse order.
