INTRODUCTION

Laptop batteries are the part most likely to fail, and usually the first to fail. This guide will show you how to replace a dead or malfunctioning battery.

Step 1 — Battery

- With both thumbs, slide the switches outward, away from the center of the laptop.

Step 2

- Using your index fingers, push the battery outward, toward your body. The angle is somewhat awkward, but don't be afraid to use a little force. The battery should slide out in one motion.

To reassemble your device, follow these instructions in reverse order.
