INTRODUCTION

How to access and remove the motherboard of the Martian Smartwatch
Step 1 — Back Plate

- Unscrew the four 3.4 mm flat head screws

Step 2

- Carefully lift the back plate off the watch. You will notice a lithium battery and rubber gasket attached to the back plate.
Step 3 — Lithium Battery

- ⓘ If not replacing lithium battery, skip down two steps.

- Using the plastic removal tool, pry the battery from the backing plate. The battery is simply attached with glue.
Step 4

- Desolder the battery connections from the motherboard. Learn how to solder components [here!](here)
Step 5 — Motherboard

- Use PH00 screw driver to remove two 2.4mm Phillips head screws.

Step 6

- Use a spudger or [tweezers](#) to remove a white sticker that covers a Phillips head screw.
Step 7

- Use PH00 screwdriver to remove 5.2mm Phillips head screw

Step 8

- Use ESD safe tweezers to remove the gold ribbon cable.

- This will expose a second 5.2mm Phillips head screw that can be removed with a PH00 screwdriver.

Step 9

- Use a spudger to gently pry on the motherboard towards the top of the watch, being towards the 12 o'clock position to loosen the motherboard.

- You can now access the parts and pieces on the bottom of, and below the motherboard.

To reassemble your device, follow these instructions in reverse order.
