INTRODUCTION

This is a guide to replace the battery of the Chromo Noria. Replacing the battery is one of the main important replacements. Without a functional battery, the life of the tablet ceases to exist.
🔧 TOOLS:

- iFixit Opening Tools (1)
- Heavy-Duty Spudger (1)
- Soldering Iron (1)
Step 1 — Back Panel

- Insert your Plastic Opening Tool into the crease between the front panel and back panel.

- Slide the Opening Tool around the entire device. As you progress, you should see the device open.
Step 2

- Carefully turn the device over.

- Lay the back panel aside so you can see the device's parts.
Step 3 — Battery

- Place your finger at the end of the tape closest to the battery.

- Peel the tape towards the flex cables to free the battery wires.

Step 4

- Using the spudger tool, place the tool along an edge of the battery.

⚠️ Be careful not to bend or break the battery! Batteries contain hazards materials.

- Move the spudger around the edges of the battery to detach it from the tablet.

Step 5

⚠ Soldering irons get very hot! Be careful when handling one. If you'd like a tutorial on how to use one, click [here](#).

● Using a soldering iron, desolder both of the battery wires. The battery's wires are located to the left of the camera's flex cable.

● Remove the battery.

To reassemble your device, follow these instructions in reverse order.
