## TOOLS:

[iFixit Opening Tool](#) (1)

[Plastic Cards](#) (1)

[Soldering Iron](#) (1)

---

## Step 1 — Battery

- Pry the seam between the screen and the case and slide it on all four sides with a large plastic opening tool until the plastic case comes off.

## Step 2

- Lift the device off of the case and flip over the device so that it sits screen side down.

## Step 3

- The device is now free from the plastic case.

## Step 4

- Wedge a [plastic card](#) beneath the battery unit and wiggle the card side to side and up and down gently until the glue sealing the battery to the device is broken.

## Step 5

- Peel back any yellow tape not directly attached to the battery.
- Using a soldering iron, desolder the two wires that connect the battery to the motherboard.
