# **TOOLS:**

- Phillips #0 Screwdriver (1)
- Phillips #000 Screwdriver (1)
- iFixit Opening Tools (1)
- Spudger (1)

#### Step 1 — Battery

- ♠ Ensure that the device is completely turned off before attempting a repair. The battery may still have charge; use caution touching the components.
- Use a plastic opening tool to remove the two rubber grips on the back of the tablet.

## Step 2

 Remove the two 10mm Phillips #0 screws located under the grips.

- Flip the tablet over and use a plastic opening tool to pry the casing away from the top of the screen. Push the back cover off.
  - (i) There is adhesive holding the case on located at the top of the screen. Push the casing toward the top of the screen while also wiggling it back and forth.

## Step 4

 Once the casing is off, remove the nine 5mm Phillips #0 screws shown.

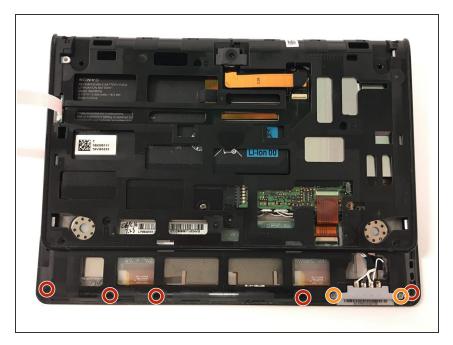

- Remove the white ribbon cable by pulling the blue tab straight up out of the socket and then peeling up the tape securing it to the tablet.
  - Use caution when removing the cable, as the socket is very fragile.

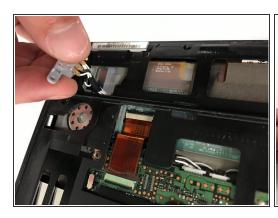

- Remove the copper ribbon cable by gently using a spudger to pry it up from its socket.
  - Use caution when removing the cable, as the socket is very fragile.

- Slide the bottom grey cover piece away from the body and remove it.
  - i If this piece gives resistance, use a spudger on the sides of the tablet to pry it loose.

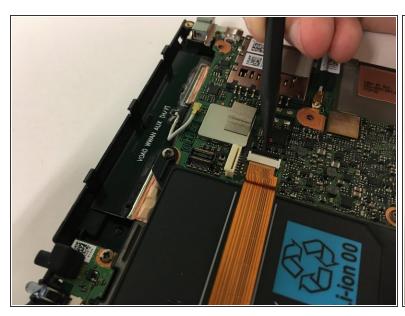

- Remove the five 4mm Phillips #000 screws.
- Remove the two 5mm Phillips #000 screws holding the charger in place.

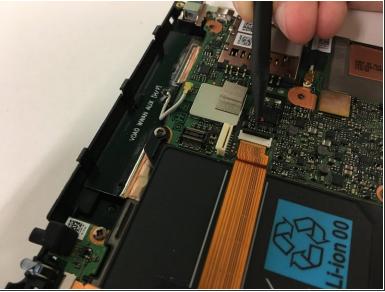

- Position the charging port at an angle so you can thread it through the opening as you remove the black plastic cover from the back of the tablet.
  - if the cover is not coming off easily, use a plastic opening tool to pry it loose from the edges of the screen.

- Use a spudger to lift the zero insertion force connector latch for the long ribbon cable to the right of the battery, then pull the cable loose from its socket.
  - Use caution when removing the cable, as the socket is very fragile.

 Remove the three 5mm Phillips #0 screws securing the original battery.

# Step 12

Use the spudger to pop the battery loose and remove the battery.

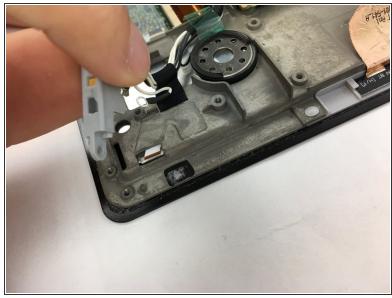

## **Step 13 — Charging Connector**

Unscrew the single 5mm Phillips #000 screw.

# Step 14

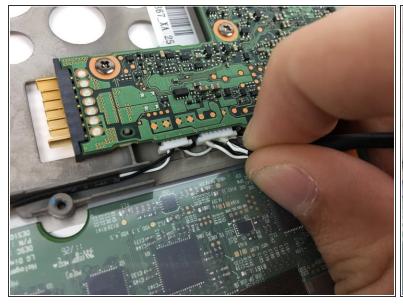

Peel up the tape securing the assembly.

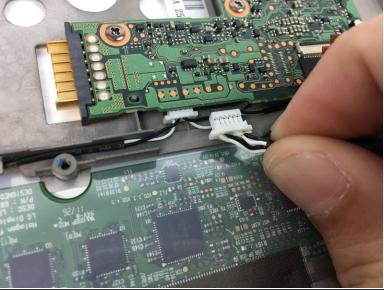

- Use a spudger to disengage the zero insertion force latch securing the copper ribbon cable.
- Pull away the ribbon cable.

- Disconnect the charging assembly from the pin connector.
  - Pull on it very gently; the socket is very fragile.

Remove the assembly.

To reassemble your device, follow these instructions in reverse order.
