Step 1 — Back Cover

- Insert the plastic opening tool into the middle of the bottom edge of the device. The tool should be inserted within the seam between the back and front covers.
- Slide the opening tool to the right and slowly continue to separate the back cover from the device.

 **Avoid prying on the buttons, as they are easily damaged.**

Step 2

- Pull the cover off of the device once about three quarters of the cover has been pried open using the plastic opening tool.

Step 3 — Battery

- Remove masking tape from the battery.

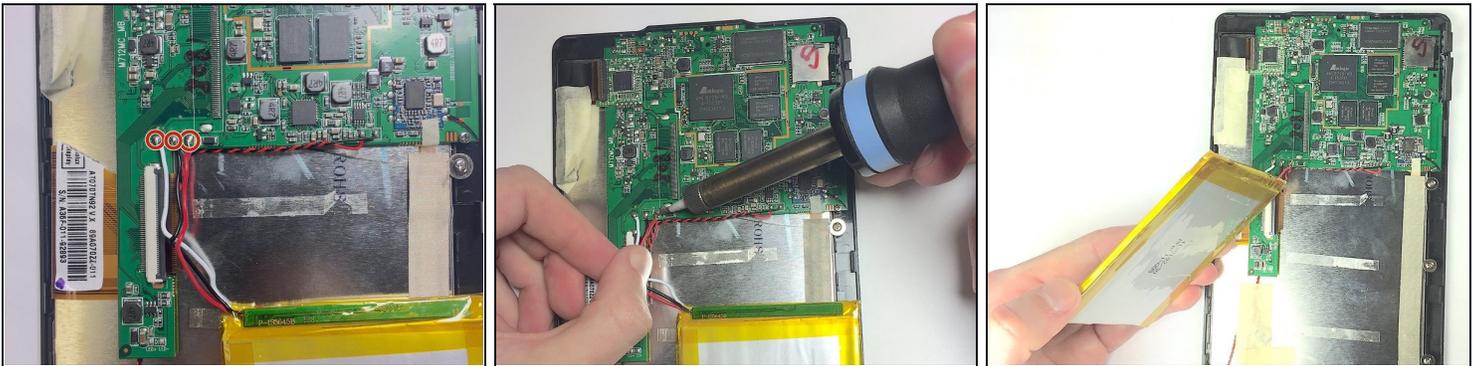

Step 4

- Pry the battery from the base using the nylon spudger and move it away from the motherboard.

⚠ Handle the battery with care to avoid damaging it.

Step 5

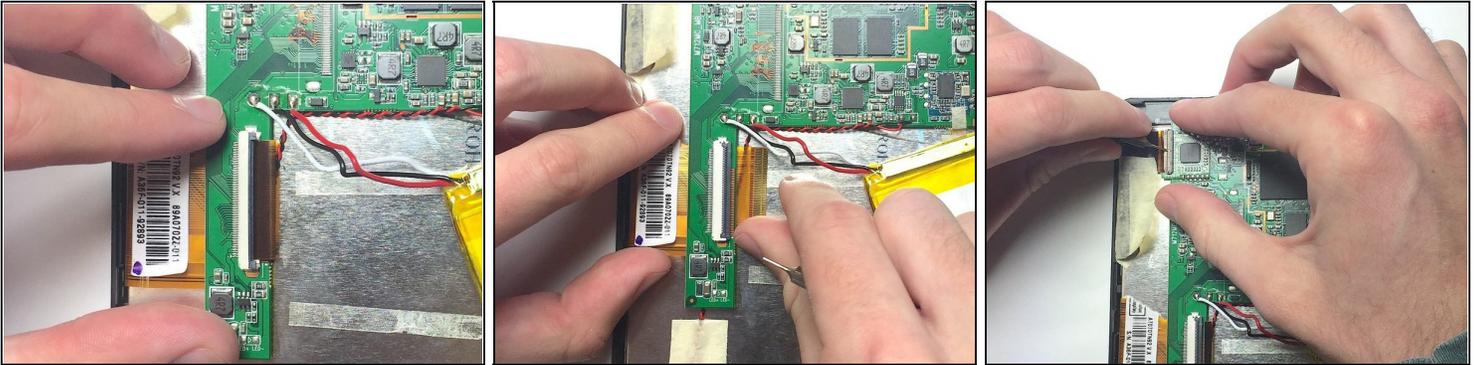

- De-solder the three contact points and remove the battery.

ⓘ See the following guide for instructions on how to solder. [How To Solder and Desolder Connections](#)

⚠ Use caution when operating the soldering iron.

Step 6 — Motherboard

- Remove the two ZIF connectors attached to the motherboard by flipping up the black tabs before pulling the ribbon cable away.

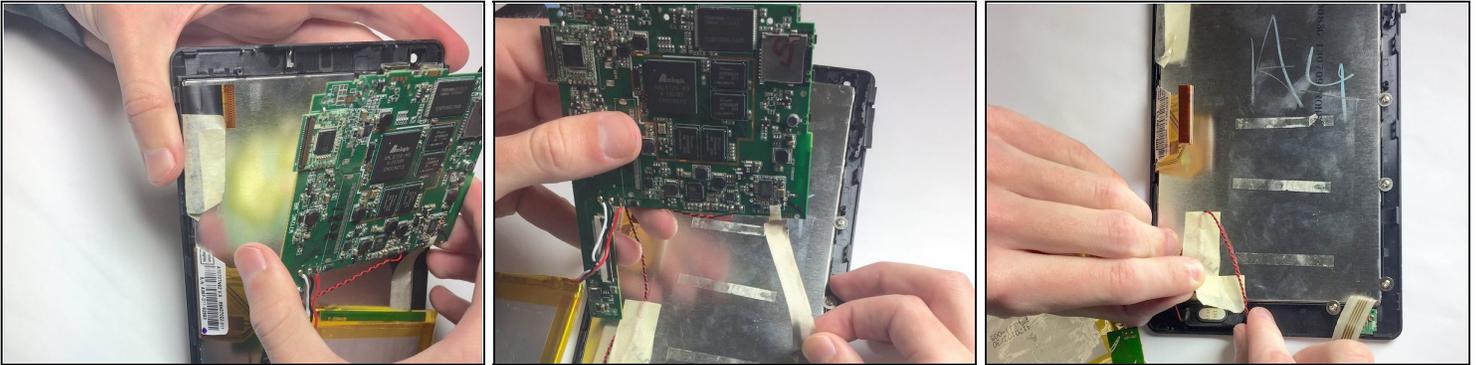

⚠ Only use a fingernail or nylon spudger to flip up the retaining flap. Using metal tools may damage delicate components.

Step 7

- Use the nut driver and J00 bit to remove the three 4 mm screws.

Step 8

- Peel back metal tape that is hiding the auxiliary port wires.
- Remove tape that is holding the speaker wires in place.
- Lift up on the motherboard to release it from the tablet.

Step 9 — Volume Buttons

- [De-solder](#) volume buttons' eight contact points.
 - ⓘ Each button has 4 points of contact.

To reassemble your device, follow these instructions in reverse order.
