

LG G3 Screen flicker and fades

Lg G3 Screen flicker and fades to Darkness !

Written By: albanjakupi

INTRODUCTION

1. Remove the battery.
2. Unfasten all screws and remove the plastic cover.
3. You will see connectors next to the charging port. Disconnect them and you can blow some air to take the dirt off.
4. Take some paper and fold it 4 to 6 times (small one).
5. After folding it make sure it is the size of the connector that is next to the Camera.
6. Place the folded paper on top of the connector.
7. Slowly get back all the plastic covers.
8. Put all screws back in and fasten them.
9. Place the battery, SD Card and the Sim back.
10. Power on the Phone.

99.9% It will work.

UPDATE:

If you want to take it a step further, get some thermal paste and remove the whole circuit board and put some on the spot (as shown in the picture) do NOT put too much a dot will be enough...

after that, you can go ahead and place the circuit board back in place, then place the paper on the connector(follow the steps 6-10)

*Even thermal pad might do the job.

Thanks,

I hope this will fix the problem !

TOOLS:

- [Phillips Screwdriver](#) (1)
- [Thermal Paste](#) (1)

PARTS:

- [Paper](#) (1)

Step 1 — Place The Folden Paper Here!

- Place The Paper Here On this Connector!

Step 2 — Thermal Paste

- A small dot will do the job better than overfilling !

It is not to Hard to perform this Fix.

Just don't touch anything else and be careful while taking the plastic cover off....

Everything is going to be fine.
