INTRODUCTION

Fix your robot's poor cleaning capabilities by cleaning/ replacing your brush.

This guide instructs you to detach the brush guard; this is intended to prevent damage to the actual brush and brush motor. Then replacement of the brush will be simple!

🔧 TOOLS:

- T10 Torx Screwdriver (1)

Step 1 — Remove Small Wheels

- **Note: This step is not necessaryto remove the brush guard. Only do this is the wheels are not spinning correctly** To begin, turn the Neato Botvac 80 upside down and locate the brush. Remove the 4 screws highlighted in red, and remove the cover. This releases the 2 small wheels, where you can remove the hair that gets tangled in them.

- You will need to remove the four 10mm bolts with a T10 Torx screwdriver.

Step 2

- Find the two inlays in front of the wheels and pull them to release the brush guard.

Step 3 — Remove Brush

- Remove brush by pulling out and to the side.

- **If you want to replace:** repeat these steps in reverse with the new brush bar

- **If you want to clean:** take the metal bearing off the side, remove the hair wrapped in the orange holder. With a scissors, cut the hair out of the brush roll. Re-insert the brushroll and re-install the brush guard

To reassemble your device, follow these instructions in reverse order.
