

# HTC EVO Design 4G Headphone Jack Replacement

Replacing this component requires intricacy and...

Written By: Lilian Nguyen

# INTRODUCTION

Replacing this component requires intricacy and caution with moving internal parts and circuitry inside the phone to avoid further damage to the other functionalities. Proceed with caution using a soldering iron used to detach the headphone jack.

---

## TOOLS:

[Desoldering Braid](#) (1)  
[Staples](#) (1)  
[Phillips #000 Screwdriver](#) (1)  
[T4 Torx Screwdriver](#) (1)  
[iFixit Opening Tool](#) (1)  
[Tweezers](#) (1)  
[Desoldering Pump](#) (1)  
[Soldering Iron](#) (1)  
[Lead-Free Solder](#) (1)

---

## Step 1 — Screen

- Tools: Phillips #000 Screwdriver, T4 Torx Screwdriver, Safety Pry Tool (Guitar pick), [Tweezers](#)

## Step 2 — Removing Casing

- Use fingers on either end of the button edges of the phone to pull back cover off. It should slide off.

## Step 3 — Removing Battery

- When open, pull on “Open” tab and it should rotate towards you
- Grab the bottom edge of the battery and pull it toward you

## Step 4 — Removing Casing

- On the side of the top casing on the phone there should be a slot. Use your safety pry tool (guitar pick) pry around the perimeter of the casing to remove it
- Info\*: The adhesive tape that you may find will not be necessary for replacement later

## Step 5 — Removing Screws

- Remove the two Phillips screws to release the casing above the port
- Remove the top and bottom pairs of Torx screws.
- Remove the middle pair of two Phillips screws.

## Step 6 — Removing Casing

- To remove the remaining cover, lift the side port, which was previously uncovered, then lift the outer shell from the bottom of the phone and slide it forward

## Step 7 — Removing Screws Continued

- Remove the two revealed screws on the outside (Torx = red, Phillips = orange), and then remove the two phillips on the bottom of the phone

## Step 8 — Removing Rear Housing

- Remove the rear housing by prying around the edge with your Safety Pry Tool

## Step 9 — Pull the Plug

- Unplug the wire connecting the vibrator to the board with your tweezers

## Step 10 — Like a Book

- Unfold motherboard from the screen (open carefully like a book)

## Step 11 — Flex Cables

- Disconnect the two aluminum flex cables

## Step 12 — Broken Bond

- The flex cables should be the only binding and after being removed should leave you with the separate screen

## Step 13 — Headphone Jack

- Use [solder sucker](#) to remove solder from the front of head phone jack
  - Use solder sucker to remove solder from the back of head phone jack
    - There are 5 soldering locations from the top view and 5 locations from the bottom view
  - ☒ Remove the piece of tape covering the underside of the headphone jack. It will not have to be reattached
  - ☒ Refer to the [How To Solder and Desolder Connections](#) guide if needed
- ⚠ Solder sucker will be very hot

---

To reassemble your device, follow these instructions in reverse order.
