

# Citizen Ecodrive Watch Battery Replacement

Although the Ecodrive watches made by Citizen...

Written By: Billy Tat

# INTRODUCTION

Although the Ecodrive watches made by Citizen contain a rechargeable battery, after a long period of usage the battery is no longer able to hold a charge. When that occurs, it would be less expensive to replace the battery instead of buying a new watch. This guide demonstrates how to properly perform a battery replacement on a Citizen Ecodrive watch.

---

## TOOLS:

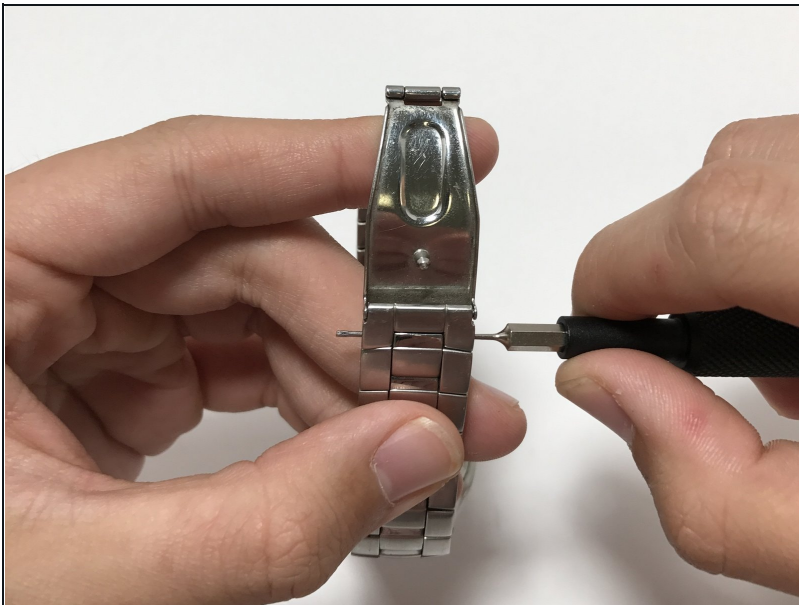

[SIM Card Eject Tool](#) (1)  
[Watch wrench](#) (1)

## PARTS:

[Citizen Ecodrive Watch Battery](#) (1)

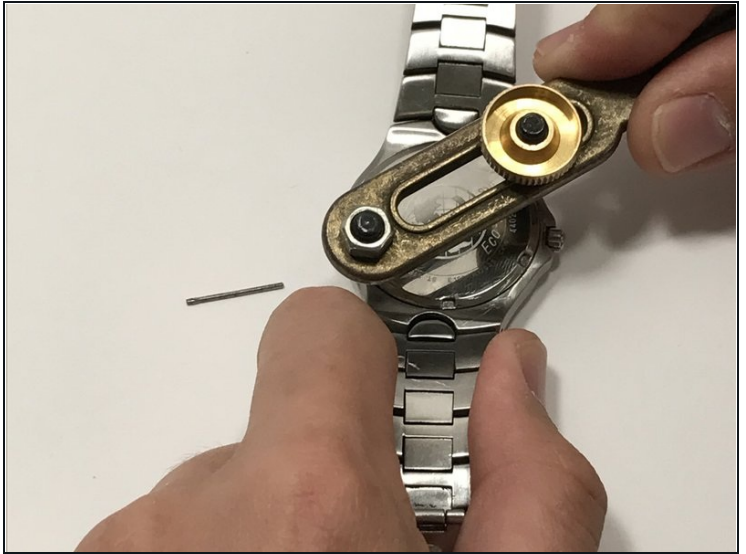

---

### Step 1 — Battery

- Remove pin from watch band link to obtain easier access to the back of the watch.

## Step 2

- Using the adjustable wrench, unscrew the back face of the watch.

## Step 3

- Using the sim removal tool, carefully pry the capacitor from its current location.

## Step 4

- Replace the capacitor with the new lithium capacitor.
- Make sure the positive side is facing upward.
- When reinserting capacitor, make sure the brass connector is inserted into the inlet of the battery slot.

## Step 5

- To close the back, use a watch press. (The watch press tool and a set of dies costs about \$15.)
- Pick one of the dies that just fits the outer edge of the bezel for the front side, and pick another one that just fits the outer edge of the back casing. Attach the die for the back on the top (the lever of the watch press) and the die for the face on the bottom (the base of the watch press).
- Place the watch face down. Arrange the seal (if any), and put the watch back gently into position.
- Squeeze the tool slowly and firmly until you hear it click into place. Some watches do not click, so check the progress as you squeeze.

## Step 6

- Pull the knob out for thirty seconds to place the watch in its "all reset" mode.

---

To reassemble your device, follow the steps in reverse order.
