🔧 TOOLS:

- Flathead 3/32" or 2.5 mm Screwdriver (1)
- Phillips #2 Screwdriver (1)

Step 1 — Top cover

- Turn the keyboard upside down to access the screws

- Remove 15 Philips PH2 screws

- (i) Don't worry about the other 16 screws, they hold the keys to the bottom case.

Step 2

- Turn the keyboard upright again and lift the top cover from the front

- Remove 6 connectors

Step 3 — Power Board

● Remove the power output connector

⚠ Take note of the order of the wires here. In this case we have the white (neutral) wire on the left, but always double check when working with mains wiring.

● Loosen the two flathead screws holding the mains wires to release them

Step 4

● Remove 4 PH2 screws holding the board to the case.
