

Dell Inspiron 7568 Cooling Fan Replacement Guide

This guide will show you how to replace the fan on your Dell Inspiron 7568.

Written By: Yash Samant

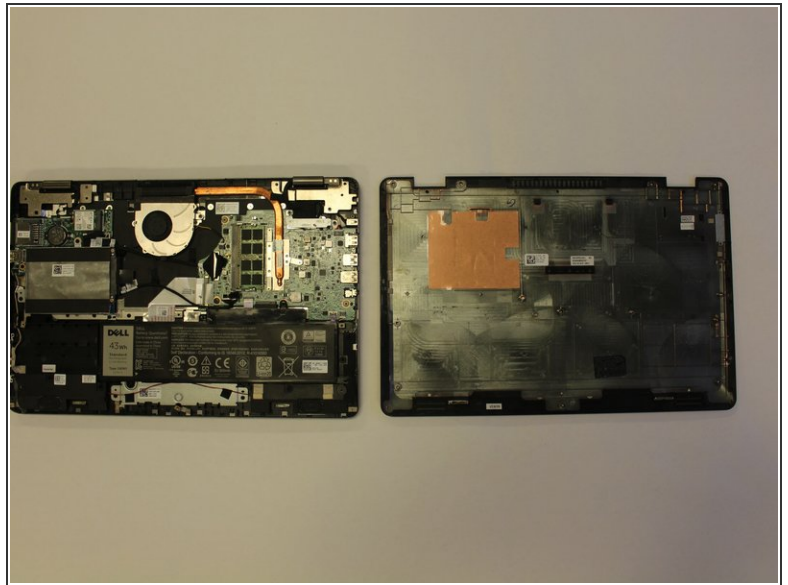

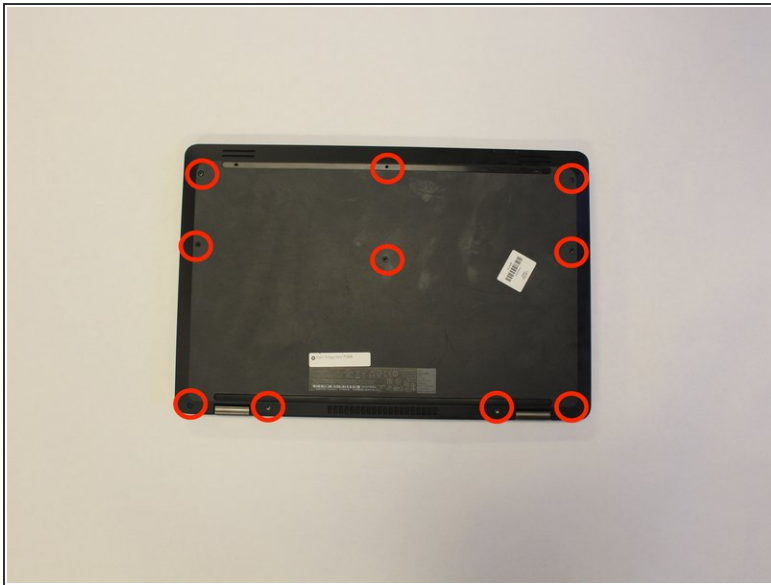

INTRODUCTION

By following the steps in this guide one should be able to replace the fan of a Dell Inspiron 7568 in under six minutes. The only tool necessary for this project is a Phillips #1 screwdriver.

TOOLS:

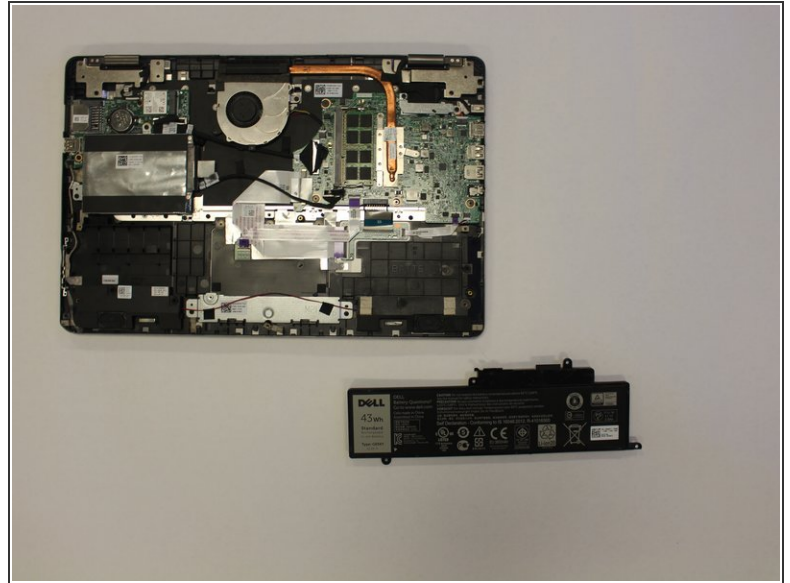

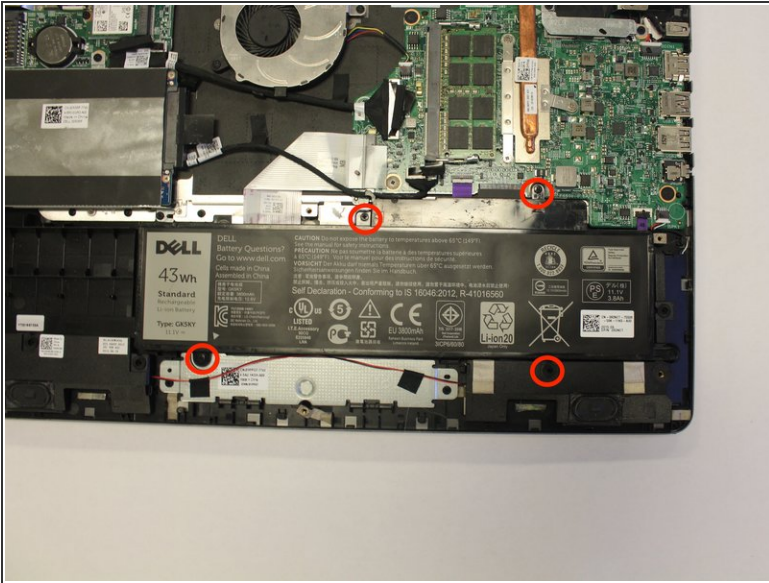

- [Phillips #1 Screwdriver](#) (1)
-

Step 1 — Battery

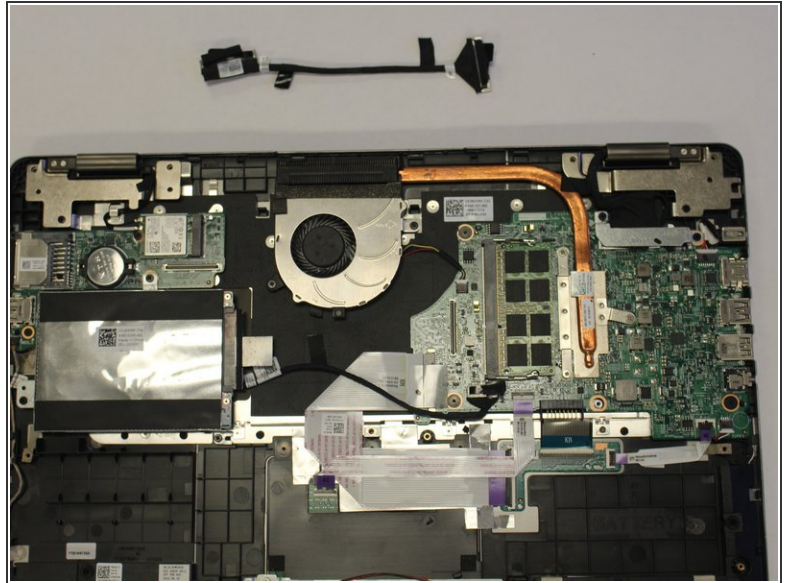

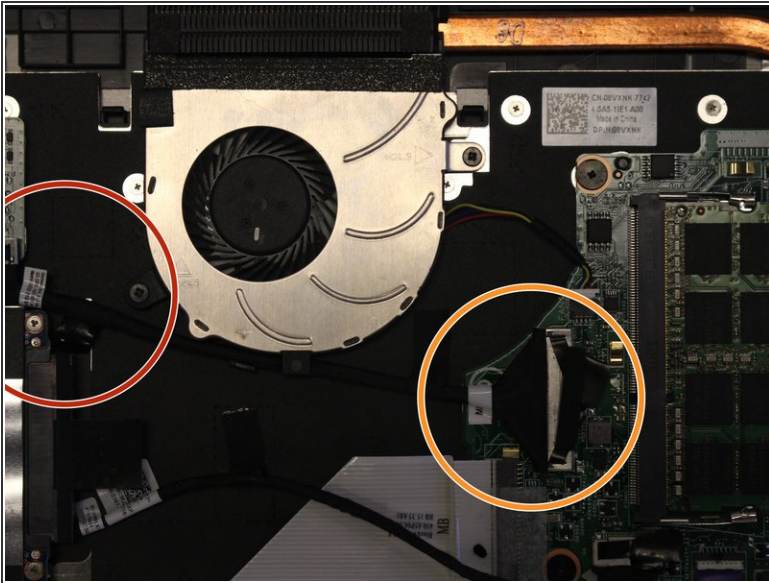

- Remove the ten 7mm Phillips #1 screws on the bottom cover.
- Remove the bottom cover.

Step 2

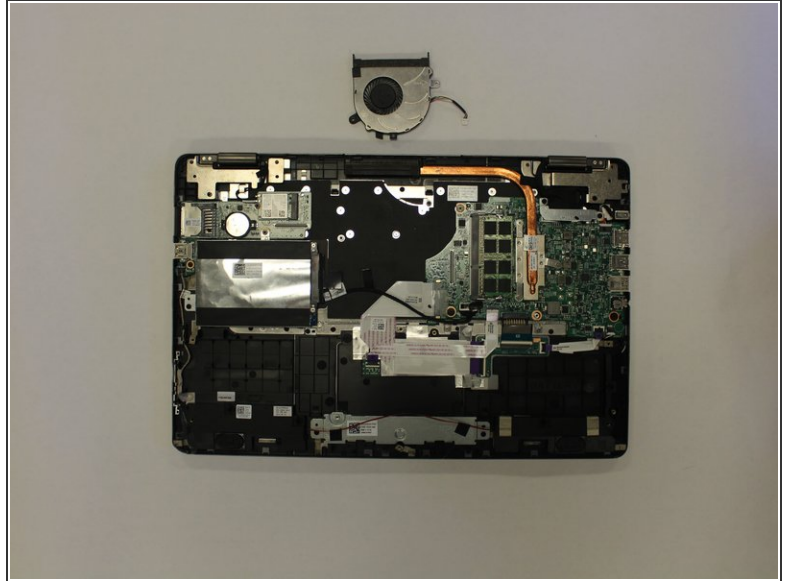

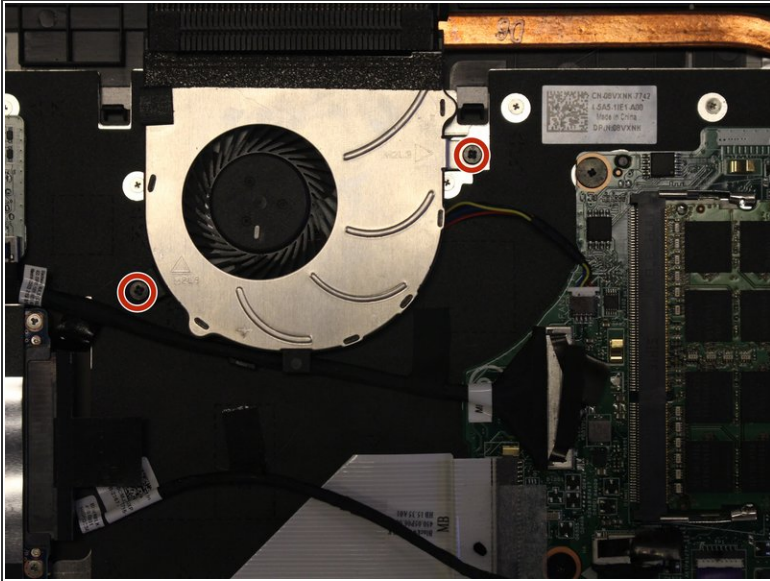

- Remove the four 3mm Phillips #1 screws holding the battery.
- Unhinge the connector cable to the battery.
- Remove the battery.

Step 3 — Cooling Fan

- Begin by unclipping the cable connecting the fan and the motherboard.
- Gently separate the motherboard cable from the clamp at the bottom of the fan.
- Remove the cable.

Step 4

- Remove the two 3mm Phillips #1 screws that hold the fan into place.
- Remove the fan.

To reassemble your device, follow these instructions in reverse order.
