# Acer Aspire One 751h-1948 Fan Replacement

Use this guide to replace the fan in the Acer Aspire One 751h-1948.

Written By: Chris Bolton

## INTRODUCTION

Use this guide to replace the fan in the Acer Aspire One 751h-1948

### 🔧 TOOLS:

- iFixit Opening Tools (1)
- Phillips #0 Screwdriver (1)

This document was generated on 2020-11-25 08:01:08 AM (MST).
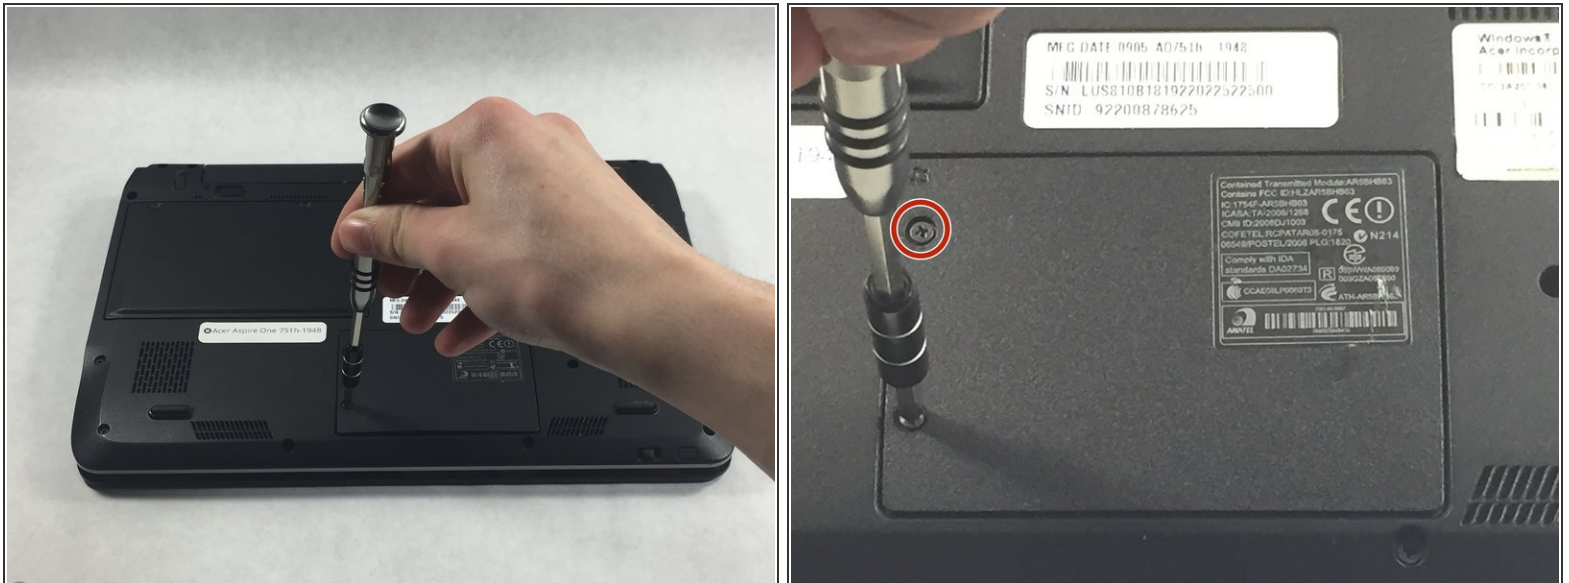

## Step 1 — Battery

- Close the laptop and flip it over to view the back of the laptop.

## Step 2

- Unlock the right side of the battery by sliding the battery lock to the right. Then slide the left lock to the left and remove the battery.
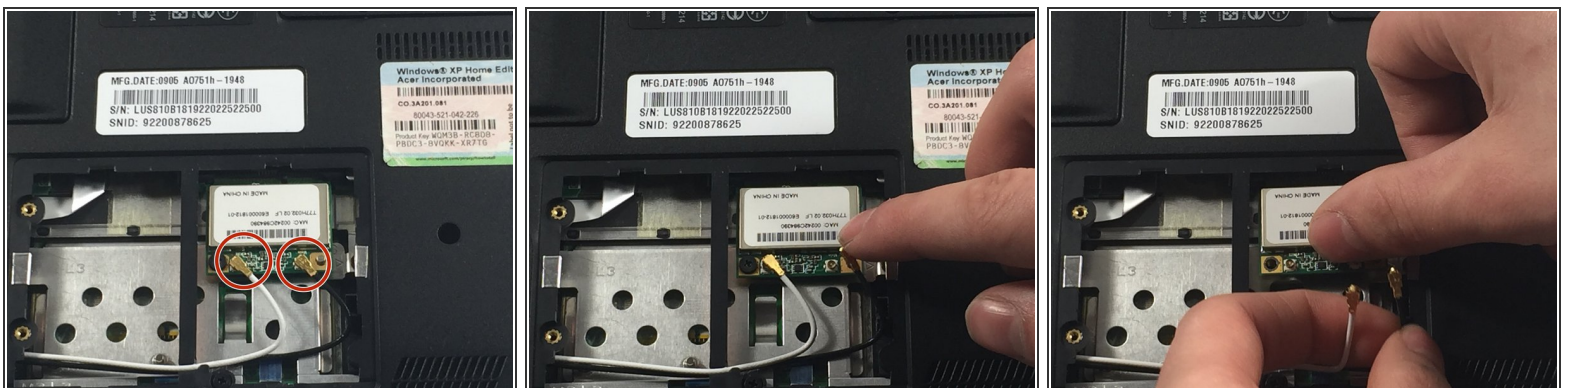

## Step 3 — Network Card

- Unscrew the two Phillips #0 (M2-L2.5 mm) holding down the network card panel.

- (i) These screws don't come all the way out.

## Step 4

- Unplug the two connecting cables by lifting them up. They should unclip easily.

This document was generated on 2020-11-25 08:01:08 AM (MST).
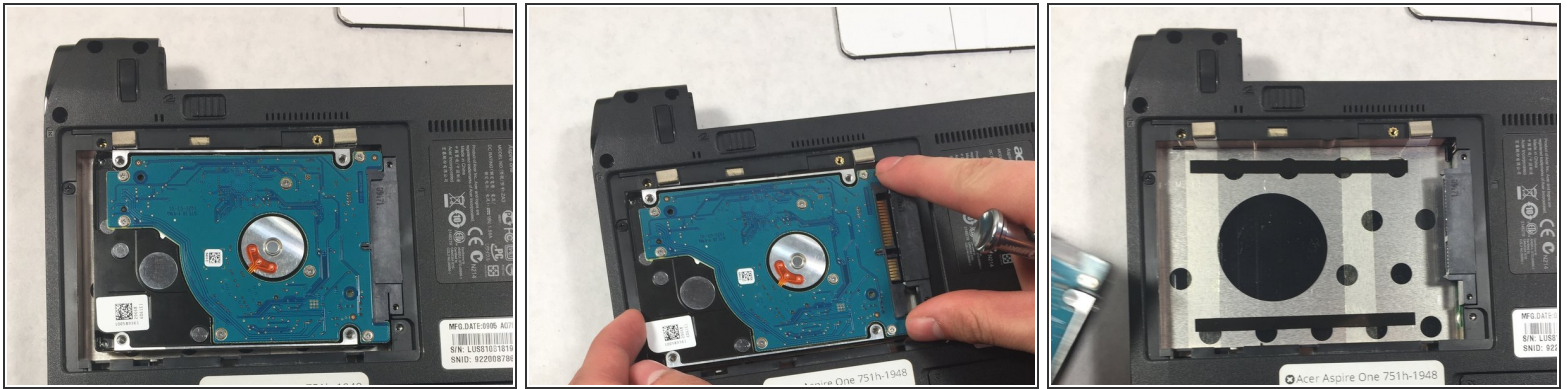

## Step 5

- Remove the screw Phillips #0 (M2-L3 mm) holding down the network card. Pull out the card.
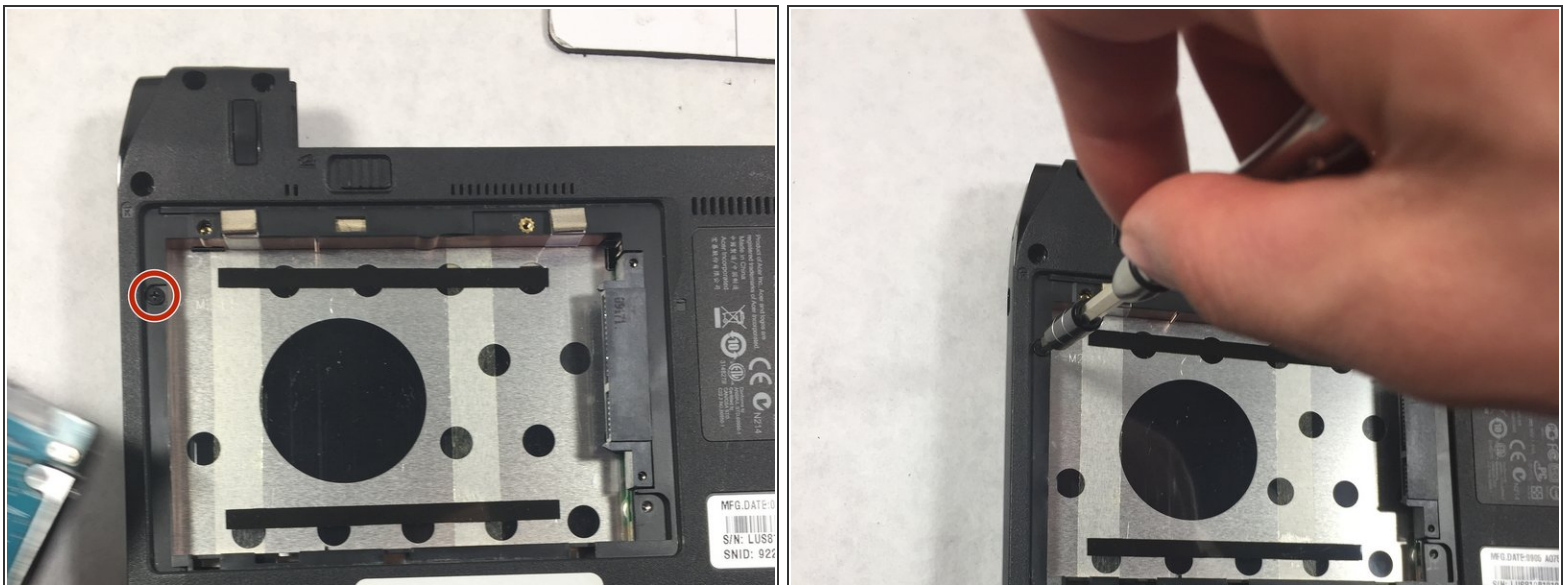

## Step 6 — Hard Drive

- Unscrew the Phillips 0# (M2 L2.5 mm) screw and remove the cover panel.

- ⓘ These screws will not come out all the way.

## Step 7

- Remove the hard drive by sliding it to the left and pull it out.

## Step 8

- Unscrew the Phillips #0 (M2-L2.5 mm) screws.

## Step 9 — Keyboard

- Use the plastic opening tool to push in each of the four clips and carefully lift the keyboard.

⚠ Don't lift the keyboard completely so that you don't damage the ribbon cable underneath.
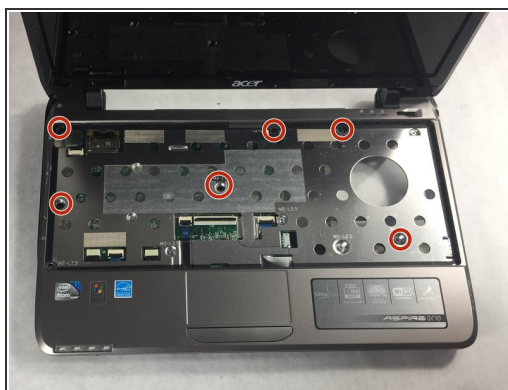

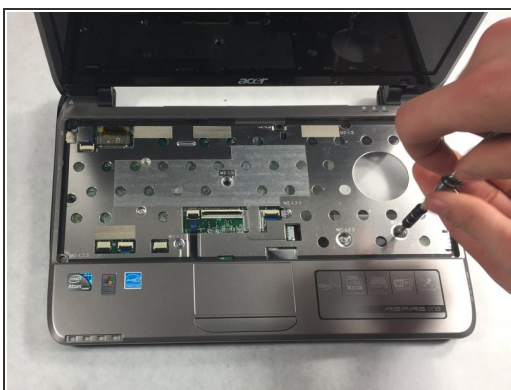

## Step 10

- When you remove the keyboard, be careful not to damage the ribbon cable that attaches it to the motherboard.

- Unplug the ribbon cable by gently lifting the black tab up. Then remove the cable.
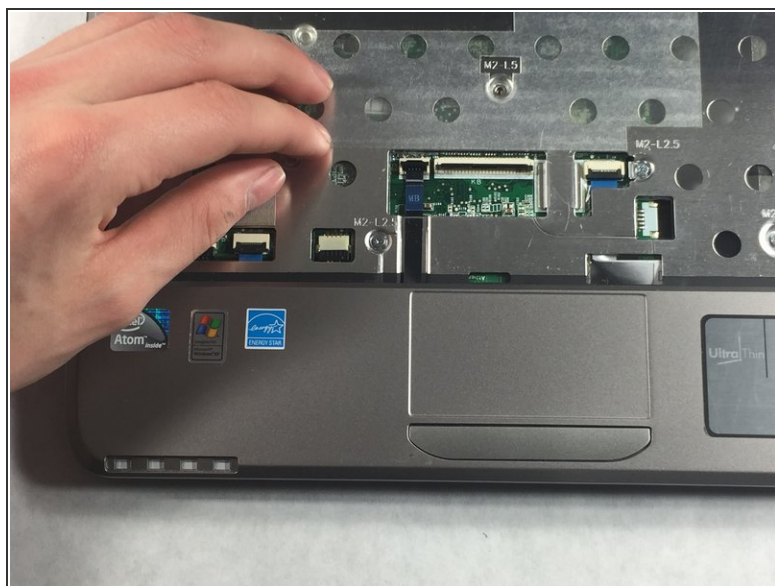

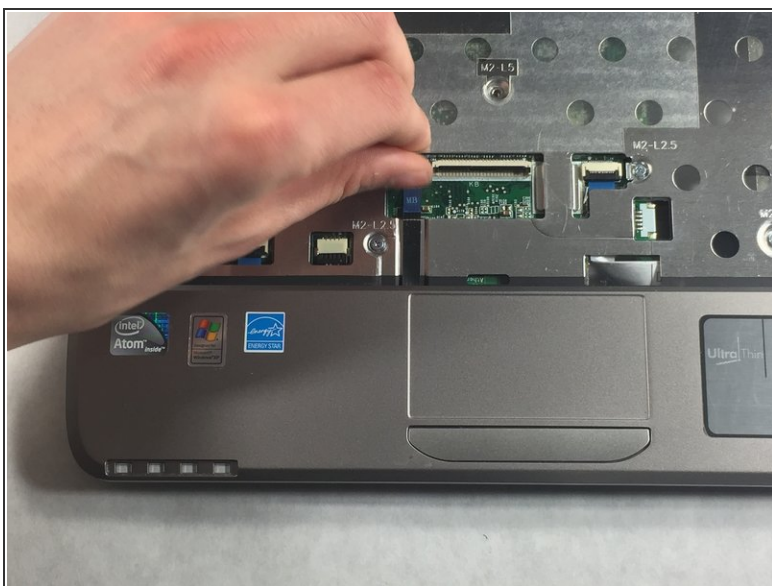

## Step 11 — Front Panel

- Use the screwdriver to remove all the Phillips #00 (M2-L2.5 mm) screws shown here.
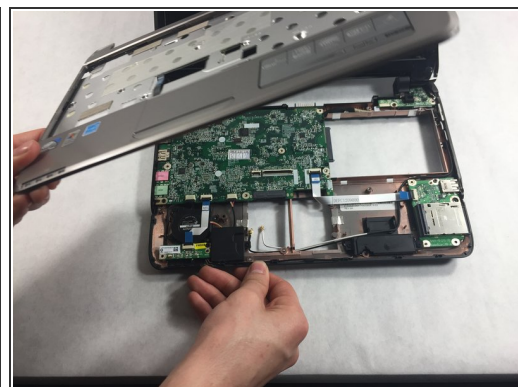

## Step 12

- Flip the laptop over and remove all the Phillips #0 (M2-L5 mm) screws under the keyboard.

- Remove all the Phillips #0 (M2-L2.5 mm) screws

## Step 13

- Lift the small black clip and remove the ribbon cable before proceeding.
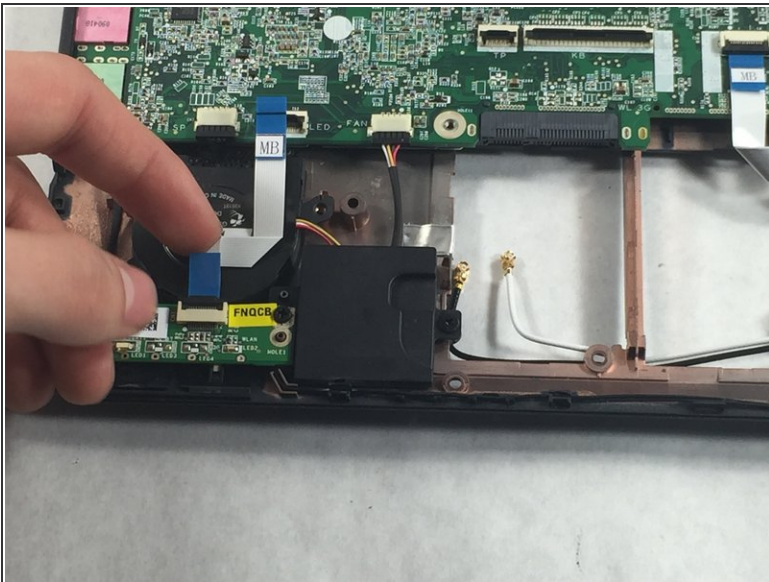

## Step 14

- Separate the front panel from the back panel, by sliding your thumb nail between them.
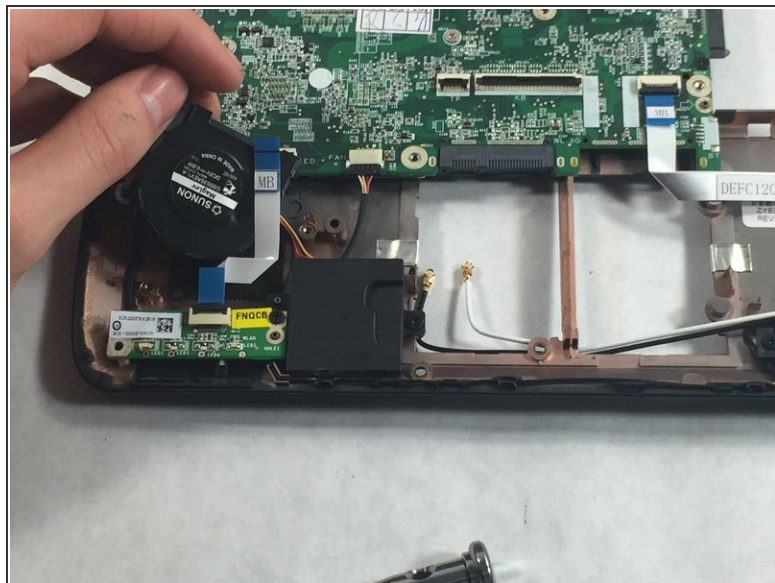

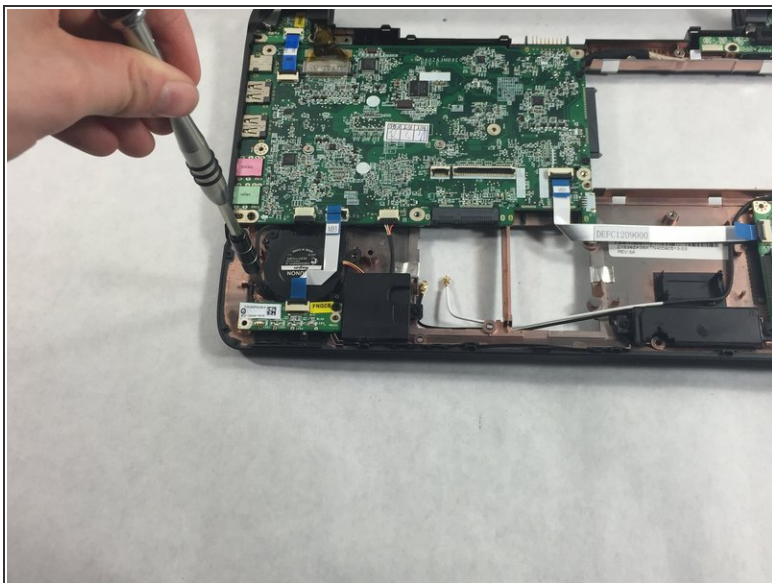

## Step 15 — Fan

- Use the screwdriver to remove Phillips #0 (M2-L5 mm) screws

## Step 16

- Remove the ribbon cable that sits on top of the fan by lifting the small black clip and pulling the blue tab.

- Use the same technique to remove the ribbon cable from the motherboard.

## Step 17

- Unscrew the Phillips #0 (M2-L2.5 mm) screw from the fan, and remove the fan.

To reassemble your device, follow these instructions in reverse order.
