

JBL Xtreme Cover Disassembly

This guide will show you how to take off the cover of the JBL Xtreme.

Written By: Benny Huynh

INTRODUCTION

This guide will help you replace a damaged cover and access other components.

TOOLS:

- [Metal Spudger](#) (1)
-

Step 1 — Cover

- Locate the seams next to the 'feet' on the bottom side of the device.

Step 2

- Use the metal spudger to gently pry and lift the edge of the seam. The cover is held in place with plastic snaps that will make a popping noise when disengaged. !!Start with the back half, this will expose TWO Screws that need to be removed before lifting the front half.

Step 3

- For the first part of the case: gently pull back the edges of the case rotating along the hinge opposite the opening seam illustrated in the second photo. Plastic snaps hold the cover in place.
- For the second part of the case: there are 2 screws to be removed at the seam. Once removed, the case will come off completely without forcing.

To reassemble your device, follow these instructions in reverse order.
