Canon PowerShot SD1300 IS Lens Replacement

This guide will show you how to properly...

Written By: Clayton

INTRODUCTION

This guide will show you how to properly replace a faulty lens on your Canon PowerShot SD1300 IS.

🔧 **TOOLS:**

JIS Driver Set (1)
J00
iFixit Opening Tool (1)

Step 1 — Lens

- Remove the two 2mm J00 screws on the right exterior.

- Remove a single 4 mm J00 on the bottom exterior.

- Remove a single 3mm J00 on the left exterior.

- Remove a single 2mm J00 screw on the left exterior hidden under the A/V Out port.
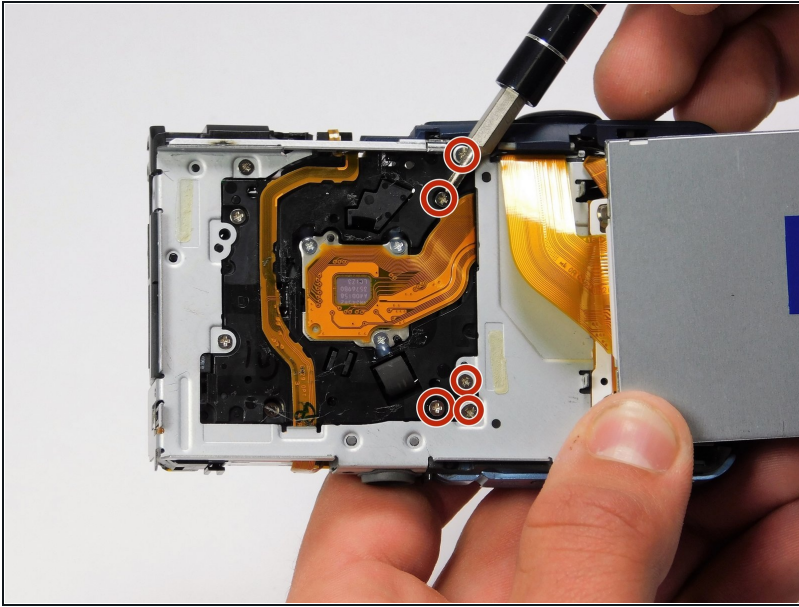

Step 2

- Once the front shell of the camera is removed the back shell should slide off just the same.

Step 3

- Use one of your plastic opening tools to separate the screen from the main body of your PowerShot.

Step 4

- Remove five of the 3mm J00 screws under the screen to release the lens for replacement.

- Lens assembly should be removed through the front of the camera once screws are removed.

To reassemble your device, follow these instructions in reverse order.
