

Dell Inspiron 13z 5323 Keyboard Replacement

In this guide you will be shown how to remove the keyboard, which is the main step for all of the common keyboard problems.

Written By: Chase Hussey

TOOLS:

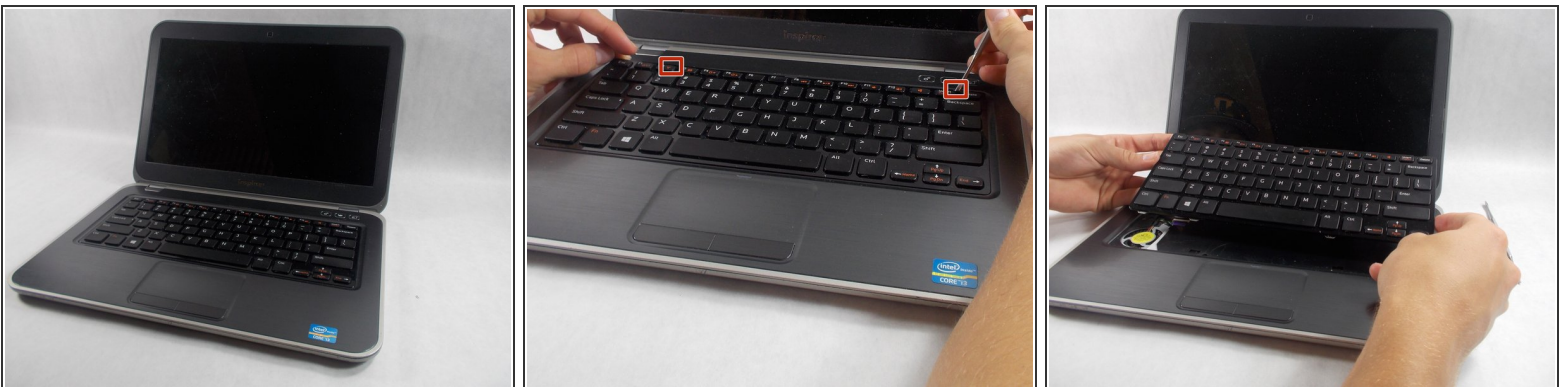

- [Phillips #00 Screwdriver](#) (1)
 - [Spudger](#) (1)
-

Step 1 — Keyboard

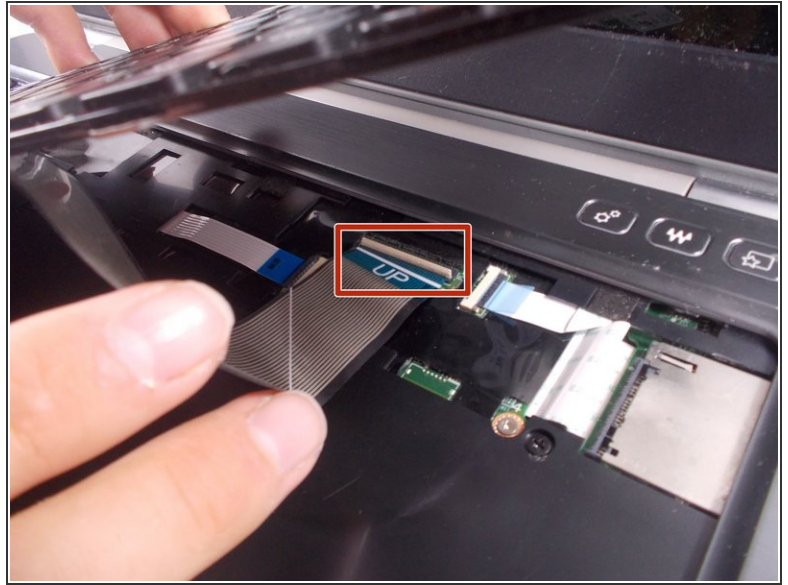

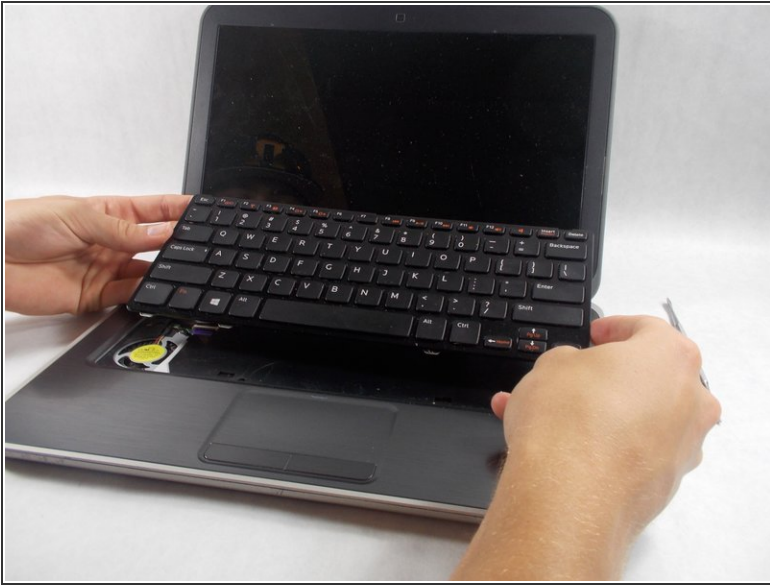

- First flip the device over, so the bottom is facing you. Then you will remove the highlighted screw.

Step 2

- Flip over the laptop and open it so that the screen is facing you.
 - At the top side of the Keyboard closest to the screen you will find 2 inset plastic clips. The clips are shown here in red. Using the flat end of the metal prying tool bend the clips in and at the same time lift the keyboard up.
- ⚠ There is a ribbon connector still attached to the bottom of the keyboard. You should be careful not to damage this cable.

Step 3

- The ribbon connector seen in yellow can be removed by flipping up the plastic hinge clamp with a thin plastic pry lever

To reassemble your device, follow these instructions in reverse order.
