## INTRODUCTION

Is your keyboard old, unusable, or literally unhinged? Try replacing your keyboard by following these steps.

### TOOLS:

- [iFixit Opening Tools](#) (1)

### PARTS:

- [keyboard panel](#) (1)

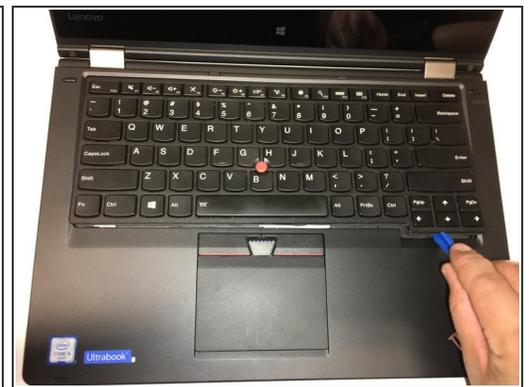

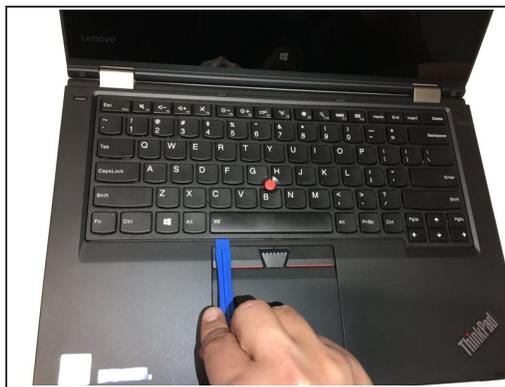

## Step 1 — Keyboard

**⚠️ Unplug and completely shut down your computer beforehand to reduce the risk of electric shock.**

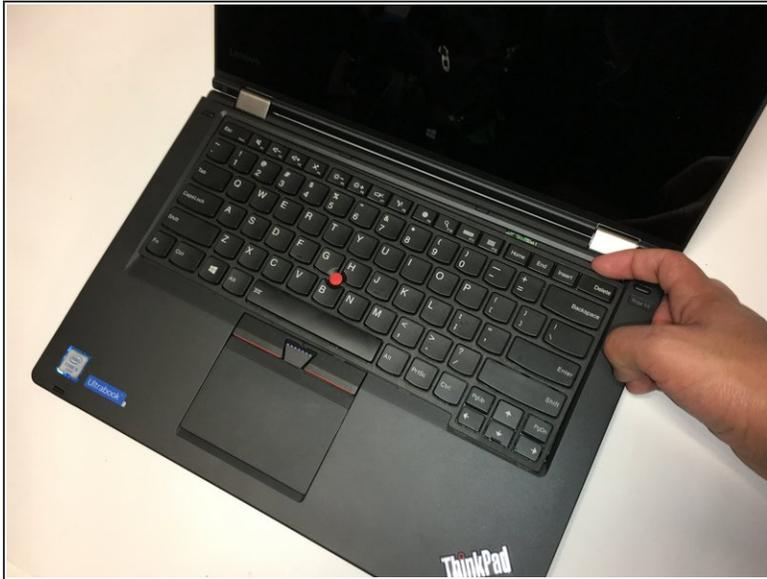

- Flip the laptop over so you can see the bottom panel.
- Unscrew the circled screws to detach the keyboard.

## Step 2

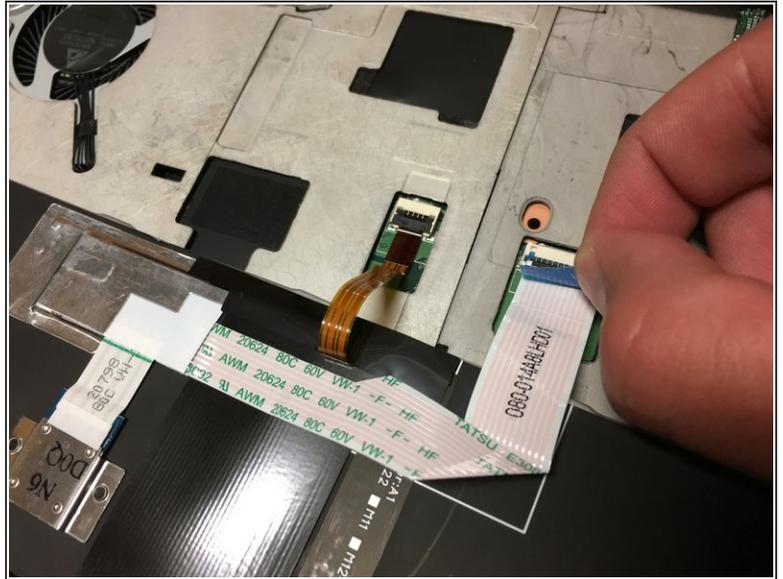

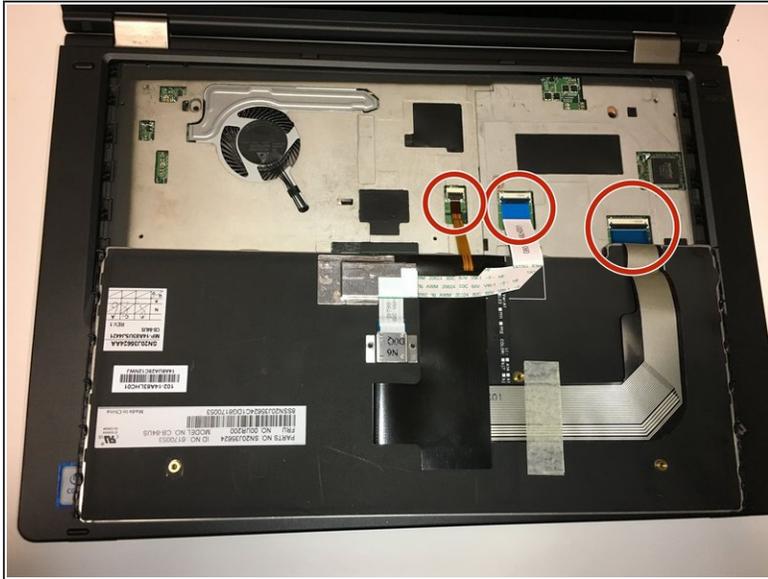

- Flip the laptop back over and open it normally.
- Use a plastic opening tool to lift up the keyboard along the bottom edge until it is detached.

### Step 3

- Using a finger, push the top of the keyboard out of its holder to completely detach it.
- Move the keyboard out of the way by rotating the far side of the keyboard towards you.

## Step 4

- i** Be gentle! These connectors are very small and can easily break off.
- Lay the keyboard on its front.
- Disconnect the 3 cables by pulling on the attached tabs.

To reassemble your device, follow these instructions in reverse order.
