INTRODUCTION

The subwoofer can wear out over time or stop working completely. This guide will show you how to remove the subwoofer on the back of the device.

🔧 TOOLS:

- Phillips #1 Screwdriver (1)
- iFixit Opening Tools (1)
- Pro Tech Toolkit (1)
150 mm Flex Extension

Step 1 — Subwoofer

- Remove the 5 (9 mm screws) around the outside edges of the back cover with the PH1 Phillips-head screwdriver.

- Lift off the back cover using the opening tool.

Step 2

- Remove the 10 (9 mm) screws marked 'A' using the PH1 Phillips-head screwdriver.

- Remove the battery by pressing the slide release button.

- Remove 2 more (9 mm) 'A' marked screws within the battery compartment using the PH1 Phillips-head screwdriver.

Step 3
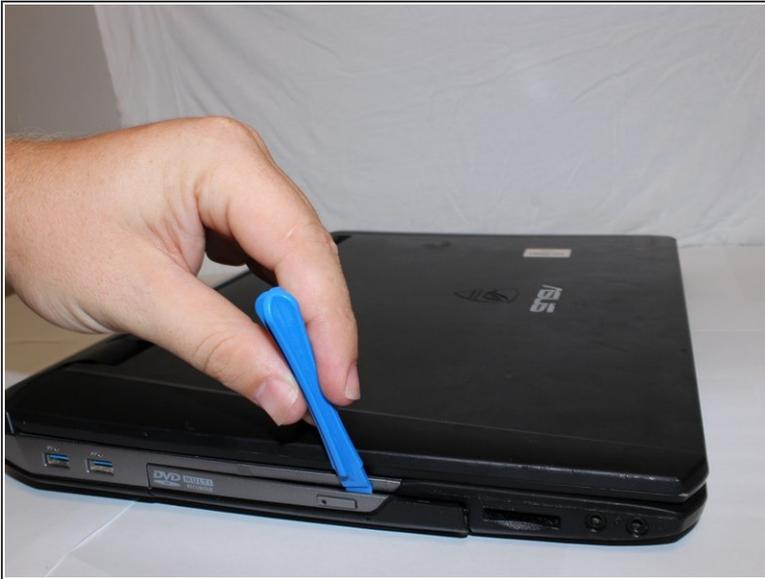

- Remove the cover for the disc drive with the opening tool.

- Remove the 6 (4 mm) 'B' marked screws with the PH1 Phillips-head screwdriver. (3 screws are in the battery compartment and 3 are under the disc drive cover)

Step 4

- Pry open the keypad platform with the opening tool.

- You will need to lift the keypad platform with your hands to get to the subwoofer.

Step 5
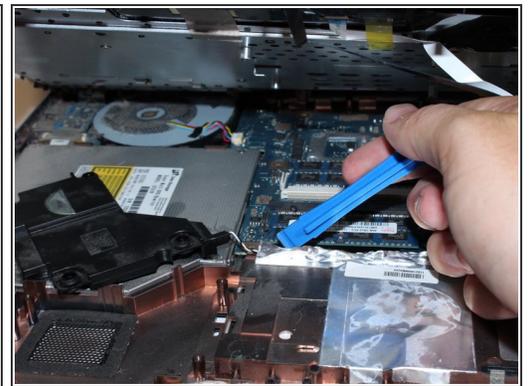

- Remove the 4 screws (6 mm) around the subwoofer with the flex extension J0 Phillips-head screwdriver.

- Lift the subwoofer out using your hands.

- Move back the film covering wiring using the opening tool to reveal a white-and-black wire.

Step 6
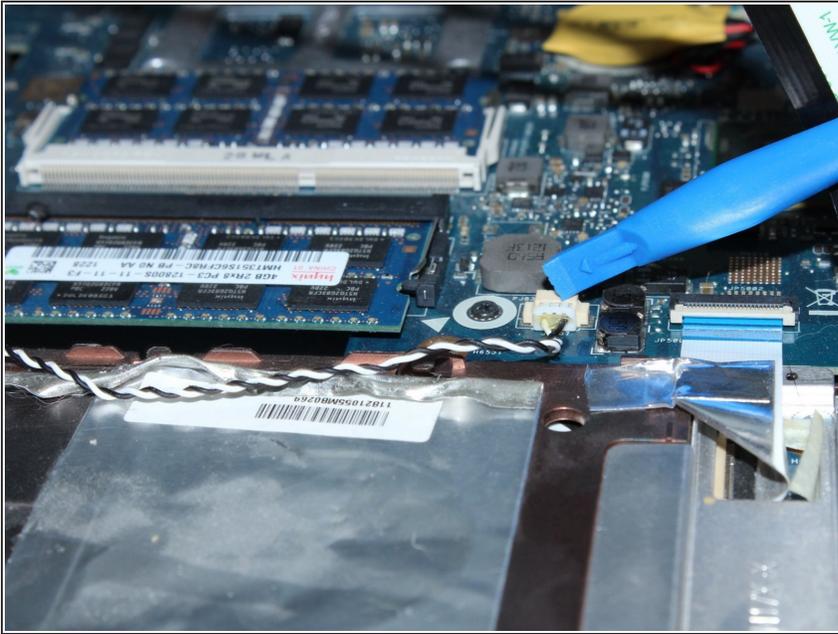

- Use the small spudger to unplug the white-and-black wire.

To reassemble your device, follow these instructions in reverse order.
